
TI-Nspire™ Technology

Version 3.1

Release Notes

Introduction

Thank you for updating your TI-Nspire™ products to Version 3.1. This version of the Release Notes has updates for all of the following products:

- TI-Nspire™ Handheld Operating System Version 3.1
- TI-Nspire™ CAS Handheld Operating System Version 3.1
- TI-Nspire™ Teacher Software Version 3.1
- TI-Nspire™ CAS Teacher Software Version 3.1
- TI-Nspire™ Student Software Version 3.1
- TI-Nspire™ CAS Student Software Version 3.1

These Release Notes are to help users who have been using TI-Nspire products update their TI-Nspire Handhelds and/or Computer Software to Version 3.1. These notes will help users see what changes have been made in this most recent release, Version 3.1. Please make sure to update all of your TI-Nspire products to the latest version to take full advantage of new features and enhancements. We recommend updating your desktop software prior to updating your handheld operating system.

Instructions on how to update your TI-Nspire or TI-Nspire CAS handheld or software are linked below:

- [Individual handhelds and software](#)
- [Concurrent and volume software licenses](#)

Note: When updating TI-Nspire with Touchpad or TI-Nspire with Clickpad handhelds to the 3.1 Operating System, you will need at least 12MB of free space on the handheld. You can find out how much free space you have on the handheld by following these steps:

- OS Version 1.7 or earlier: Press HOME (⏠), 8:System Info, 4:Handheld Status
- OS Version 2.0 or later: Press HOME (⏠), 5:Settings & Status, 4:Status

To make additional space on your TI-Nspire handheld either delete documents or move them to your computer until you have updated the OS.

Maintenance Release.....	4
Update Operating System for Lab Cradle	4

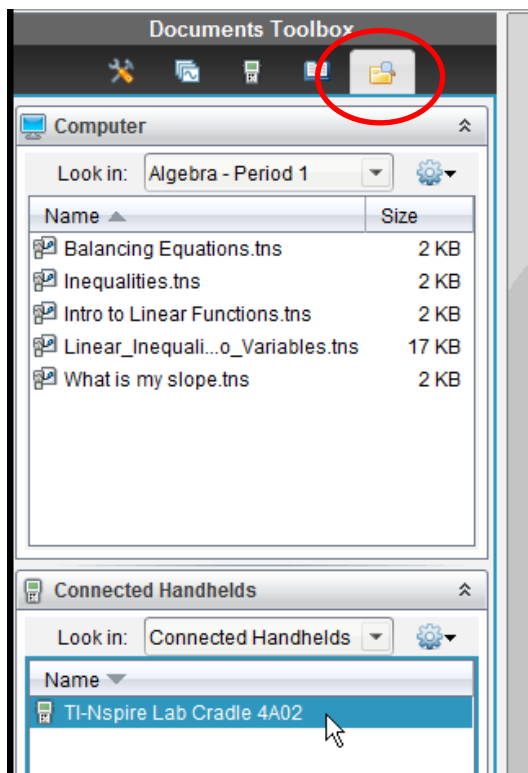

Maintenance Release

The TI-Nspire 3.1 release is a maintenance release that introduces new products targeted for specific geographic markets (such as China) and supports the release of TI-Nspire Navigator for Networked Computers. While there are not major new features added to the TI-Nspire handheld Operating System and TI-Nspire Teacher and Student desktop software with release version 3.1, there are minor bug fixes and added improvements which cause us to recommend you update to the version 3.1.

Update Operating System for Lab Cradle

The TI-Nspire Lab Cradle was introduced with the TI-Nspire version 3.0 release. The TI-Nspire Teacher Software and TI-Nspire Student Software version 3.1 release add the ability to update the Operating System (OS) for the TI-Nspire Lab Cradle.

Updating the OS of the TI-Nspire Lab Cradle is similar to updating the OS of a TI-Nspire handheld. You can download any updates to the Lab Cradle OS from the TI website (education.ti.com). Once you have saved the OS file to your computer, connect the Lab Cradle to your computer using a USB cable.

In the Documents Toolbox area on the left side of your screen, select the Content Explorer tab (the far right tab circled in red in the diagram). In the connected handheld section at the bottom of the Content Explorer, make sure that the TI-Nspire Lab Cradle is selected (as shown).

From the Tools menu, you can then select Install Handheld/Lab Cradle OS. You'll be asked to choose the Lab Cradle OS file that you saved to your computer. Once you make this selection, the update should start.
