Contents

Introduction

In this Reference Guide you will find the following information:

- CATALOGUE, Strings, Hyperbolic Functions - Includes instructions on browsing, using, entering strings, and other functions in the CATALOGUE.
- Commands and Functions Listing - Includes an alphabetical listing of all CATALOGUE items, referencing:
  - Function or Instruction/Arguments
  - Results
  - Key or Keys/Menu or Screen/Item
- Arithmetic Operations, Test Relations and Symbols - Items whose names are not alphabetic (such as +, !, and >).
- Error Messages - Includes a listing of error types with possible causes and suggested remedies.

CATALOGUE, Strings, Hyperbolic Functions

What Is the CATALOGUE?

The CATALOGUE is an alphabetical list of all functions and instructions on the TI-84 Plus CE. You also can access each CATALOGUE item from a menu or the keyboard, except:

- The six string functions
- The six hyperbolic functions
- The **solve(** instruction without the equation solver editor
- The inferential stat functions without the inferential stat editors

Note: The only CATALOGUE programming commands you can execute from the home screen are **GetCalc(**, **Get(**, and **Send(**.

Browsing the TI-84 Plus CE Catalogue Help

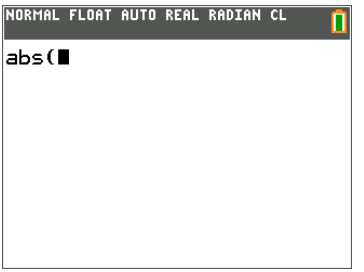
Selecting an Item from the CATALOGUE

To browse and select a **CATALOGUE** item, follow these steps.

1. Press 2nd [catalog] to display the **CATALOGUE**.

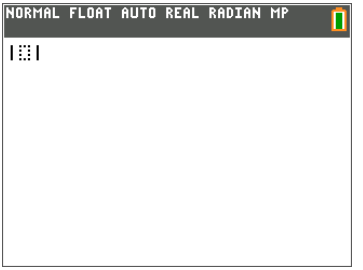
   The ▸ in the first column is the selection cursor.

2. Press ▼ or ▲ to scroll the **CATALOGUE** until the selection cursor points to the item you want.
   - To jump to the first item beginning with a particular letter, press that letter; alpha-lock is on.
   - Items that begin with a number are in alphabetical order according to the first letter after the number. For example, **2-PropZTest(** is among the items that begin with the letter **P**.
   - Functions that appear as symbols, such as **+**, $^{-1}$, **<**, and $\sqrt{}$**(**, follow the last item that begins with **Z**. To jump to the first symbol, **!**, press [θ].
3. Press entrer to paste the item to the current screen.

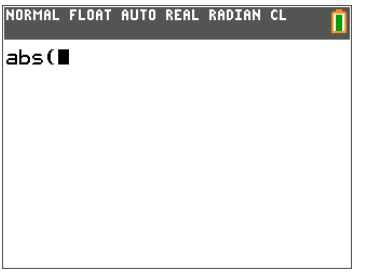


Note:

- From the top of the **CATALOGUE** menu, press ▲ to move to the bottom. From the bottom, press ▼ to move to the top.
- When your TI-84 Plus CE is in MathPrint™ mode, many functions will paste the MathPrint™ template on the home screen. For example, **abs(** pastes the absolute value template on the home screen instead of **abs(**.



MathPrint™



Classic

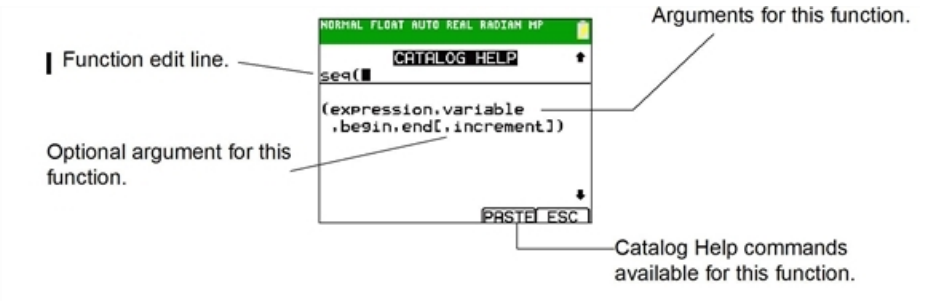
Using Catalogue Help

Displaying Catalogue Help

You can display Catalogue Help arguments for functions in two ways:

- Using an alpha/numeric function listing in the Catalogue (e.g, 2nd [catalog]).
- Using the functions listed in certain menus (e.g, math).

Catalogue Help lists the valid arguments for the function under the edit line. Arguments in brackets are optional.



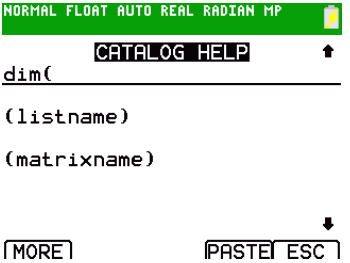
1. Display the menu that contains the function.
2. Use ▲ and/or ▼ to move the cursor to the function.
3. Press + to display arguments for the function. The cursor is on the function edit line.

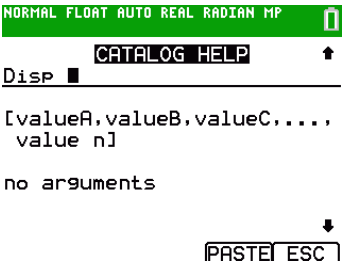
Note:

- The catalogue (2nd [catalog]) is displayed in alphabetical order. When you display the catalogue, the alpha-lock is turned on. Press the first letter of the function name to skip function names that come before it alphabetically. Use ▲ and/or ▼ to move the cursor to the function.
- Not all catalogue functions have associated arguments. If the function does not require a argument, Catalogue Help displays the message "***No arguments required for this item***."

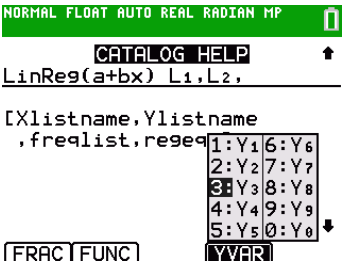
Catalogue Help Commands

- Select **MORE** (if available) to display more arguments for the function.



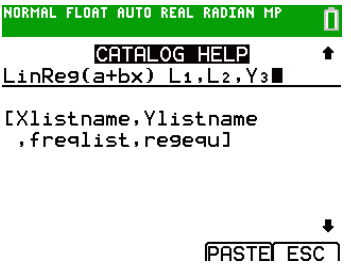


- Use shortcut menus alpha [f1] through [f4] through for argument values if available.



- Enter your argument values on the function edit line, and then select **PASTE** to paste the function and the argument values you entered.

  Note: You can paste to most cursor locations.



- Select **ESC** to exit the Catalogue Help screen.

Entering and Using Strings

What Is a String?

A string is a sequence of characters that you enclose within quotation marks. On the TI-84 Plus CE, a string has two primary applications.

- It defines text to be displayed in a programme.
- It accepts input from the keyboard in a programme.

Characters are the units that you combine to form a string.

- Each number, letter, and space counts as one character.
- Each instruction or function name, such as **sin(** or **cos(**, counts as one character; the TI-84 Plus CE interprets each instruction or function name as one character.

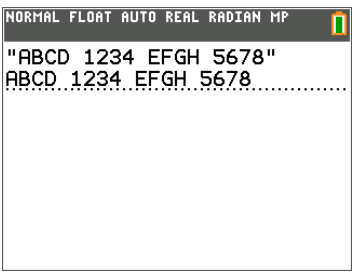
Entering a String

To enter a string on a blank line on the home screen or in a programme, follow these steps.

1. Press [alpha] ["] to indicate the beginning of the string.
2. Enter the characters that comprise the string.
   - Use any combination of numbers, letters, function names, or instruction names to create the string.
   - To enter a blank space, press [alpha] [␣].
   - To enter several alpha characters in a row, press [alpha] [A-lock] to activate alpha-lock.
3. Press [alpha] ["] to indicate the end of the string.

   "*string*"

4. Press [entrer]. On the home screen, the string is displayed on the next line without quotations. An ellipsis (**...**) indicates that the string continues beyond the screen. To scroll to see the entire string, press [▶] and [◀].



Note: A string must be enclosed in quotation marks. The quotation marks do not count as string characters.

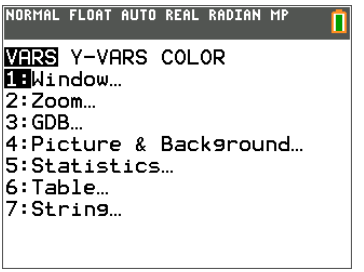
Storing Strings to String Variables

String Variables

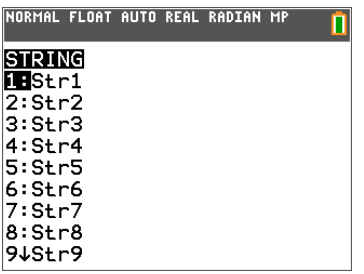
The TI-84 Plus CE, has 10 variables to which you can store strings. You can use string variables with string functions and instructions.

To display the **VARS STRING** menu, follow these steps.

1. Press [vars] to display the **VARS** menu. Move the cursor to **7:String**.



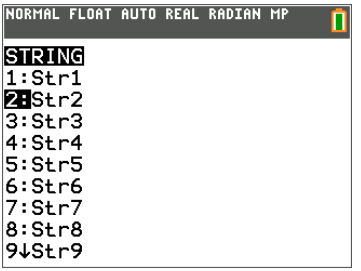
2. Press [entrer] to display the **STRING** secondary menu.



Storing a String to a String Variable

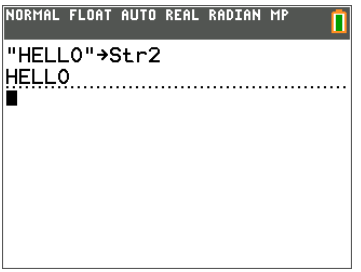
To store a string to a string variable, follow these steps.

1. Press [alpha] ["], enter the string, and press [alpha] ["].
2. Press [sto→].
3. Press [vars] **7** to display the **VARS STRING** menu.
4. Select the string variable (from **Str1** to **Str9**, or **Str0**) to which you want to store the string.



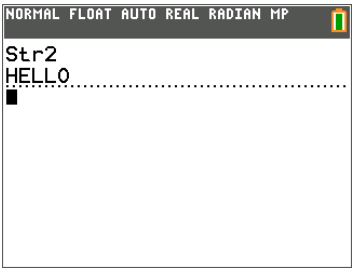
The string variable is pasted to the current cursor location, next to the store symbol (→).

5. Press entrer to store the string to the string variable. On the home screen, the stored string is displayed on the next line without quotation marks.



Displaying the Contents of a String Variable

To display the contents of a string variable on the home screen, select the string variable from the **VARS STRING** menu, and then press entrer. The string is displayed.



String Functions and Instructions in the CATALOGUE

Displaying String Functions and Instructions in the CATALOGUE

String functions and instructions are available only from the CATALOGUE. The table below lists the string functions and instructions in the order in which they appear among the other **CATALOGUE** menu items. The ellipses in the table indicate the presence of additional CATALOGUE items.

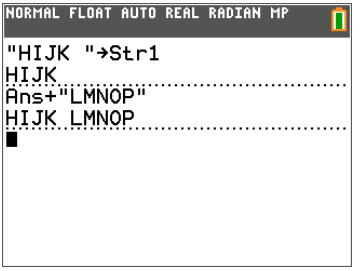
CATALOGUE	
...	
Equ▶String(	Converts an equation to a string.
...	
expr(	Converts a string to an expression.
...	
inString(	Returns a character's place number.
...	
length(	Returns a string's character length.
...	
String▶Equ(	Converts a string to an equation.
sub(	Returns a string subset as a string.
...	

Concatenation

To concatenate two or more strings, follow these steps.

1. Enter *string1*, which can be a string or string name.
2. Press +.
3. Enter *string2*, which can be a string or string name. If necessary, press + and enter *string3*, and so on.

   string1+*string2*+*string3*...
4. Press enter to display the strings as a single string.



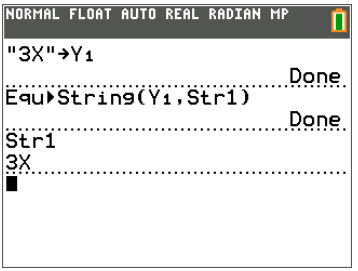
Selecting a String Function from the CATALOGUE

To select a string function or instruction and paste it to the current screen, follow the steps for selecting an item from the CATALOGUE.

Equ▸String(

Equ▸String(converts an equation to a string. The equation must be store in a VARS Y-VARS variable. **Y***n* contains the equation. **Str***n* (from **Str1** to **Str9**, or **Str0**) is the string variable to which you want the equation to be stored.

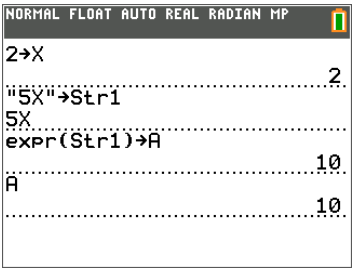
Equ▸String(Y*n*,**Str***n*)

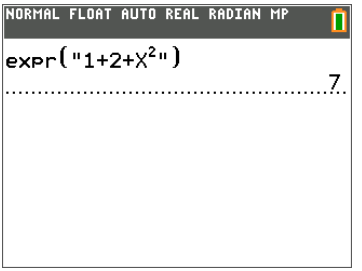


expr(

expr(converts the character string contained in *string* to an expression and executes it. *string* can be a string or a string variable.

expr(*string***)**

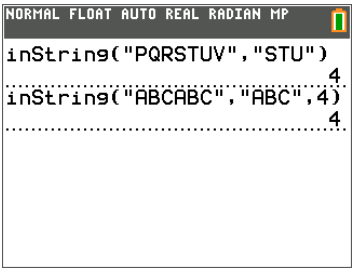




inString(

inString(returns the character position in *string* of the first character of *substring*. *string* can be a string or a string variable. *start* is an optional character position at which to start the search; the default is 1.

inString(*string*,*substring*[,*start*]**)**



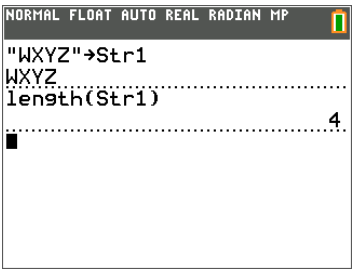
Note: If *string* does not contain *substring*, or *start* is greater than the length of *string*, **inString(** returns **0**.

length(

length(returns the number of characters in *string*. *string* can be a string or string variable.

Note: An instruction or function name, such as **sin(** or **cos(,** counts as one character.

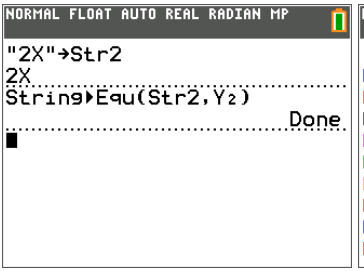
length(*string***)**

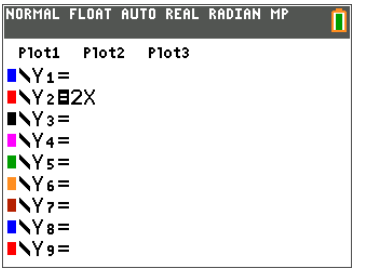


String▶Equ(

String▶Equ(converts *string* into an equation and stores the equation to **Y***n*. *string* can be a string or string variable. **String▶Equ(** is the inverse of **Equ▶String(**.

String▶Equ(*string*,**Y***n***)**

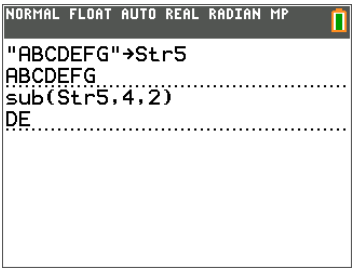




sub(

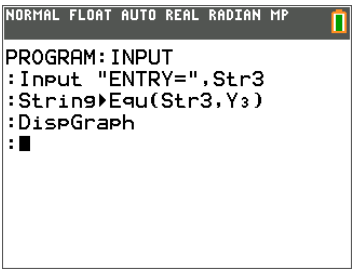
sub(returns a string that is a subset of an existing *string*. *string* can be a string or a string variable. *begin* is the position number of the first character of the subset. *length* is the number of characters in the subset.

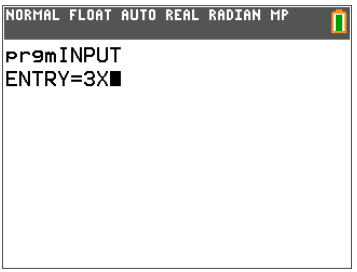
sub(*string*,*begin*,*length***)**

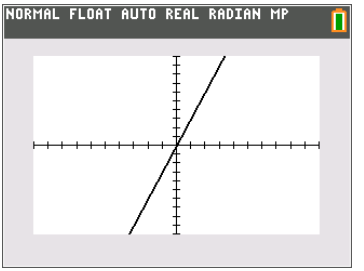


Entering a Function to Graph during Program Execution

In a program, you can enter a function to graph during program execution using these commands.







Note: When you execute this program, enter a function to store to **Y3** at the **ENTRY=** prompt.

Hyperbolic Functions in the CATALOGUE

Hyperbolic Functions

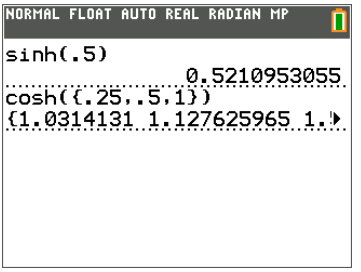
The hyperbolic functions are available only from the CATALOGUE. The table below lists the hyperbolic functions in the order in which they appear among the other **CATALOGUE** menu items. The ellipses in the table indicate the presence of additional CATALOGUE items.

CATALOGUE	
...	
cosh(	Hyperbolic cosine
$\cosh^{-1}($	Hyperbolic arccosine
...	
sinh(	Hyperbolic sine
$\sinh^{-1}($	Hyperbolic arcsine
...	
tanh(	Hyperbolic tangent
$\tanh^{-1}($	Hyperbolic arctangent
...	

sinh(, cosh(, tanh(

sinh(, **cosh(**, and **tanh(** are the hyperbolic functions. Each is valid for real numbers, expressions, and lists.

sinh(*value***)**
cosh(*value***)**
tanh(*value***)**



sinh^{-1}(, cosh^{-1}(, tanh^{-1}(

sinh^{-1}(is the hyperbolic arcsine function. **cosh^{-1}(** is the hyperbolic arccosine function. **tanh^{-1}(** is the hyperbolic arctangent function. Each is valid for real numbers, expressions, and lists.

sinh^{-1}(*value***)**
cosh^{-1}(*value***)**
tanh^{-1}(*value***)**

Commands and Functions Listing

The purpose of this table of information is to provide a short description with syntax of command arguments as appropriate and menu locations for each command or function in the catalogue listing in the calculator.

This table is useful for executing commands when using the calculator or creating TI-Basic programs.

Items whose names are not alphabetic (such as +, !, and >) are listed in the Arithmetic Operations, Test Relations, and Symbols section. Unless otherwise specified, all examples in this section were performed in the default reset mode, and all variables are assumed to be the default value of 0.

From the **catalogue** you can paste any function or command to the home screen or to a command line in the program editor.

The same syntax information for function and command arguments below is available on the calculator and also in the TI Connect™ CE Program Editor.

- On the calculator, pressing [+] when a function or command is highlighted in the menu listing will display the catalogue Help syntax editor to assist your entries.
- Using TI Connect™ CE Program Editor, the catalogue listing also displays the syntax of the arguments for functions and commands.

Note that some functions and commands are only valid when executed in a TI-Basic program and not from the home screen.

The items in this table appear in the same order as they appear in the **catalogue** ([2nd] [catalogue].)

In the table below, the **†** symbol indicates either keystrokes or certain commands which are only available in the Program Editor mode on the calculator. Press [prgm] and select to **EDIT** an existing program or **NEW** to start a new programme to set the calculator in the Program Edit mode.

Some arguments are optional. Optional arguments will be indicated within **[ ]** in the syntax help given in the table below. **[ ]** are not symbols on the calculator and are not to be typed in. They are used here only to indicate an optional argument.

On the calculator, functions and commands paste as "tokens." This means they paste as one character and not as individual letters, symbols and spaces. Do not attempt to type in any function or command on the calculator. Just paste the token from menu locations. Watch the cursor jump over tokens as you edit to get a better understanding of tokens.

In TI Connect™ CE Program Editor, you can "feel" the same experience of pasting tokens when using the catalogue tree provided in that editor. You also can type in the functions and commands if you know the correct format and syntax. TI Connect™ CE "tokenises" the functions and commands when you send the programme to the calculator. However, you must type in the functions and commands in exactly the same way as the tokens. Note that some commands will have spaces as part of the token which you might not see. For example, Pause command as a token has a space at the

end. Once you send the programme to the calculator, you can run the programme and if there are any syntax errors, you can fix the issues on either the calculator or in TI Connect™ CE Program Editor.

CTL I/O COLOUR EXEC

Colour Numbers	Names
10	BLUE
11	RED
12	BLACK
13	MAGENTA
14	GREEN
15	ORANGE

CALC
A: Σ Int(

invBinom(

invBinom(*area*,*trial*,*p*)

The inverse binomial cumulative distribution function results in the minimum number of successes, such that the cumulative probability for that minimum number of successes ≥ the given cumulative probability (area). If more information is needed, also find the binomcdf for the result from invBinom(as shown below for a full analysis.

2nd [DISTR]

DISTR

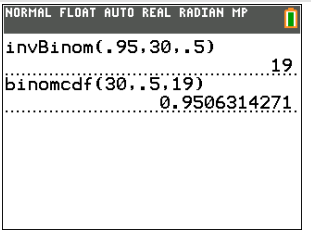
C:invBinom(

Details:

Assume the toss of a fair coin 30 times. What is the minimum number of heads you must observe such that the cumulative probability for that number of observed heads is at least 0.95?

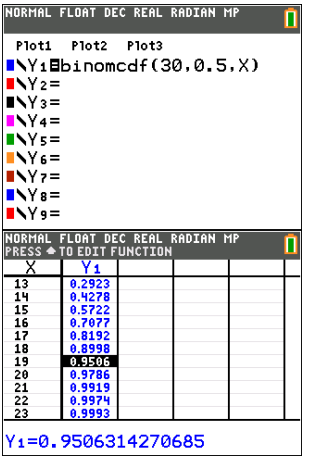
The results on the screen first show that the minimum number of successes to obtain at least the given cumulative probability of 0.95 is 19. Next, the cumulative probability for up to 19 is computed using binomcdf(and is approximately 0.9506314271 which meets the criteria of 0.9506314271≥0.95

invBinom(



Alternate Method:

Set Y1=binomcdf(30,0.5,X) and use the table of values (starting at 0 and increment by 1) to find when the cumulative probability is at or just above the given cumulative probability. This gives you a view of all values to make decisions. For this example, search in the table to find the cumulative probability just larger than 0.95. Again, the number of successes is 19.



invNorm(

invNorm(*area*[,μ,σ,tail]**)** 2nd [DISTR]

tail [catalogue]: **LEFT**, **CENTRE**, **RIGHT** **DISTR**

Computes the inverse cumulative normal distribution function for a given area under the normal distribution curve specified by μ and σ. The optional argument tail can be **LEFT** (-∞,-a), **CENTRE** [-a,a] or **RIGHT** (a, ∞) for Real a. **3:invNorm(**

The tokens **LEFT**, **CENTRE** and **RIGHT** can be found in [catalogue].

LEFT

LEFT

2nd [CATALOG]

7:pxl-Test(

P▶Rx(

P▶Rx(*r*,θ**)**

Returns **X**, given polar coordinates *r* and θ or a list of polar coordinates.

2nd [ANGLE]
ANGLE
7:P▶Rx(

P▶Ry(

P▶Ry(r,θ)

Returns **Y**, given polar coordinates r and θ or a list of polar coordinates.

2nd [ANGLE]
ANGLE
8:P▶Ry(

Q

QuadReg

QuadReg [*Xlistname*,*Ylistname*,*freqlist*,*regequ*]

Fits a quadratic regression model to *Xlistname* and *Ylistname* with frequency *freqlist*, and stores the regression equation to *regequ*.

STAT
CALC
5:QuadReg

QuartReg

QuartReg [*Xlistname*,*Ylistname*,*freqlist*,*regequ*]

Fits a quartic regression model to *Xlistname* and *Ylistname* with frequency *freqlist*, and stores the regression equation to *regequ*.

STAT
CALC
7:QuartReg

R

Radian

Radian

Sets radian angle mode.

† MODE
Radian

rand

rand[(*numtrials***)]**

Returns a random number between 0 and 1 for a specified number of trials *numtrials*.

MATH
PRB
1:rand

randBin(

randBin(*numtrials*,*prob*[,*numsimulations*])

Generates and displays a random real number from a specified Binomial distribution.

MATH
PRB
7:randBin(

randInt(

randInt(*lower*,*upper* **[**,*numtrials***])**

Generates and displays a random integer within a range specified by *lower* and *upper* integer bounds for a specified number of trials *numtrials*.

MATH
PRB
5:randInt(

randIntNoRep(

randIntNoRep(*lowerint*,*upperint* [,*numelements*])

Returns a randomly ordered list of integers from a lower integer to an upper integer which may include the lower integer and upper integer. If the optional argument *numelements* is specified, the first *numelements* are listed. The first *numelements* term in the list of random integers are displayed.

MATH
PRB
8:randIntNoRep(

randM(

randM(*rows*,*columns***)**

Returns a random matrix of *rows* × *columns*.

Max rows x columns = 400 matrix elements.

2nd [MATRIX]
MATH
6:randM(

randNorm(

randNorm(μ,σ**[**,*numtrials***])**

Generates and displays a random real number from a specified Normal distribution specified by μ and σ for a specified number of trials *numtrials*.

MATH
PRB
6:randNorm(

re^θi

re^θi

Sets the mode to polar complex number mode (**re^θi**).

† MODE
r *e* **^** θ *i*

Real

Real

Sets mode to display complex results only when you enter complex numbers.

† MODE
Real

real(

real(*value*)

Returns the real part of a complex number or list of complex numbers.

MATH
CPLX
2:real(

RecallGDB

RecallGDB *n*

Restores all settings stored in the graph database variable **GDB***n*.

2nd [DRAW]
STO
4:RecallGDB

RecallPic

RecallPic *n*

Displays the graph and adds the picture stored in **Pic***n*.

2nd [DRAW]

Draws the density function for the χ^2 distribution specified by degrees of freedom *df*, and shades and colours the area between *lowerbound* and *upperbound*.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

ShadeF(

ShadeF(*lowerbound*,*upperbound*,*numerator df*,*denominator df*[,*colour#*]**)**

2nd [DISTR] **DRAW** **4:ShadeF(**

Draws the density function for the F distribution specified by *numerator df* and *denominator df* and shades and colours the area between *lowerbound* and *upperbound*.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

ShadeNorm(

ShadeNorm(*lowerbound*,*upperbound*[,μ,σ,*colour#*]**)**

2nd [DISTR] **DRAW** **1:ShadeNorm(**

Draws the normal density function specified by μ and σ and shades and colours the area between *lowerbound* and *upperbound*.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

Shade_t(

Shade_t(*lowerbound*,*upperbound*,*df*[,*colour#*]**)**

2nd [DISTR] **DRAW** **2:Shade_t(**

Draws the density function for the Student-t distribution specified by degrees of freedom df, and shades or colours the area between *lowerbound* and *upperbound*.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

Simul

Simul

Sets mode to graph functions simultaneously.

† MODE
Simul

sin(

sin(*value***)**

Returns the sine of a real number, expression, or list.

SIN

sin^{-1}(

sin^{-1}(*value***)**

Returns the arcsine of a real number, expression, or list.

2nd [SIN^{-1}]

sinh(

sinh(*value***)**

Returns the hyperbolic sine of a real number, expression, or list.

2nd [CATALOG]
sinh(

sinh^{-1} (

sinh^{-1} (*value***)**

Returns the hyperbolic arcsine of a real number, expression, or list.

2nd [CATALOG]
sinh^{-1} (

SinReg

SinReg
[*iterations*,*Xlistname*,*Ylistname*,*period*,*regequ***]**

Attempts *iterations* times to fit a sinusoidal regression model to *Xlistname* and *Ylistname* using a *period* guess, and stores the regression equation to *regequ*.

STAT
CALC
C:SinReg

solve(

solve(*expression*,*variable*,*guess*,{*lower*,*upper*}**)**

Solves *expression* for *variable*, given an initial *guess* and *lower* and *upper* bounds within which the solution is sought.

† [MATH]
MATHS
0:solve(

SortA(

SortA(*listname***)**

Sorts elements of *listname* in ascending order.

[2nd] [LIST]
OPS
1:SortA(

SortA(

SortA(*keylistname*,*dependlist1*
[,*dependlist2*,...,*dependlist n***])**

Sorts elements of *keylistname* in ascending order, then sorts each *dependlist* as a dependent list.

StorePic *n*

Stores current picture in picture **Pic***n*.

2nd [DRAW]
STO
1:StorePic

String▶Equ(

String▶Equ(*string*,**Y=** *var*)

Converts *string* into an equation and stores it in **Y=** *var*.

string can be a string or string variable.

String▶Equ(is the inverse of **Equ▶String(**.

† PRGM
I/O
F:String▶Equ(

sub(

sub(*string*,*begin*,*length*)

Returns a string that is a subset of another *string*, from *begin* to *length*.

2nd [CATALOG]
sub(

sum(

sum(*list*[,*start*,*end*])

Returns the sum of elements of *list* from *start* to *end*.

2nd [LIST]
MATH
5:sum(

summation Σ(

Σ(*expression*[,*start*,*end*])

Classic command as shown.

In MathPrint™ the summation entry template displays and returns the sum of elements of *list* from *start* to *end*, where *start* <= *end*.

MATH
NUM
0: summation Σ(

T

tan(

tan(*value*)

Returns the tangent of a real number, expression, or list.

TAN

tan^{-1}(

tan^{-1}(*value***)**

2nd [TAN^{-1}]

Returns the arctangent of a real number, expression, or list.

Tangent(

Tangent(*expression***,***value***[,***colour#***,***linestyle#***])**

2nd [DRAW]
DRAW
5:Tangent(

Draws a line tangent to *expression* at **X**=*value* with specified *colour#*: 10-24 and line style *linestyle #:* 1-2.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

tanh(

tanh(*value***)**

2nd
[CATALOG]
tanh(

Returns hyperbolic tangent of a real number, expression, or list.

tanh^{-1}(

tanh^{-1}(*value***)**

2nd
[CATALOG]
tanh^{-1}(

Returns the hyperbolic arctangent of a real number, expression, or list.

tcdf(

tcdf(*lowerbound***,***upperbound***,***df***)**

2nd [DISTR]
DISTR
6:tcdf(

Computes the Student-*t* distribution probability between *lowerbound* and *upperbound* for the specified degrees of freedom *df*.

Text(

Text(*row***,***column***,***text1***,***text2***,...,***text n***)**

2nd [DRAW]
DRAW
0:Text(

Writes *text* on graph beginning at pixel (*row*,*column*), where 0 *row* 164 and 0 *column* 264.

Full mode, row must be <=148; column must be 256

Horiz mode, row must be row<=66 and column must be <=256

G-T mode, row must be row <=126; column must be 176

TextColour(

TextColour([*colour#*]

† 2nd [DRAW]

TextColour(

Set text colour prior to using the **Text(** command.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

DRAW
A:TextColour(

Then

Then
See **If:Then**

Thick

Thick

Resets all Y=editor line-style settings to Thick.

† MODE
Thick

Thin

Thin

Resets all Y=editor line-style settings to Thin.

† MODE
Thin

Time

Time

Sets sequence graphs to plot with respect to time.

† 2nd [FORMAT]
Time

timeCnv(

timeCnv(*seconds***)**

Converts seconds to units of time that can be more easily understood for evaluation. The list is in *{days,hours,minutes,seconds}* format.

2nd [CATALOG]
timeCnv

TInterval

TInterval [*listname,freqlist,confidence level***]**
(Data list input)

Computes a *t* confidence interval.

† STAT
TESTS
8:TInterval

toString(

toString((*value***[,***format***])**

† PRGM

toString(

Converts value to a string where *value* can be real, complex, an evaluated expression, list or matrix. String *value* displays in classic *format* (0) following the mode setting AUTO/DEC or in decimal *format* (1).

I/O
E:toString(

TInterval

TInterval $\bar{x}$,*Sx*,*n*[,*confidence level*]
(Summary stats input)

Computes a *t* confidence interval.

† [STAT]
TESTS
8:TInterval

tpdf(

tpdf(*x*,*df*)

Computes the probability density function (pdf) for the Student-*t* distribution at a specified *x* value with specified degrees of freedom *df*.

[2nd] [DISTR]
DISTR
5:tpdf(

Trace

Trace

Displays the graph and enters **TRACE** mode.

[TRACE]

T-Test

T-Test μ*0*
[,*listname*,*freqlist*,*alternative*,*drawflag*,*colour#*])
(Data list input)

Performs a *t* test with frequency *freqlist*. *alternative*=**-1** is **<**; *alternative*=**0** is ≠; *alternative*=**1** is **>**. *drawflag*=**1** draws results; *drawflag*=**0** calculates results.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

† [STAT]
TESTS
2:T-Test

T-Test

T-Test μ*0*,$\bar{x}$,*Sx*,*n*[,*alternative*,*drawflag*,*colour#*])

Performs a *t* test with frequency *freqlist*. *alternative*=**-1** is <; *alternative*=**0** is ≠; *alternative*=**1** is >. *drawflag*=**1** draws results; *drawflag*=**0** calculates results.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

† [STAT]
TESTS
2:T-Test

tvm_FV

tvm_FV[(N,I%,*PV*,*PMT*,*P/Y*,*C/Y*)]

Computes the future value.

APPS
1:Finance
CALC
6:tvm_FV

tvm_I%

tvm_I%[(N,*PV*,*PMT*,*FV*,*P/Y*,*C/Y*)]

Computes the annual interest rate.

APPS

X

xor

valueA **xor** *valueB*

Returns 1 if only *valueA* or *valueB* = 0. *valueA* and *valueB* can be real numbers, expressions, or lists.

2nd [TEST]
LOGIC
3:xor

xyLine

xyLine Plot#(*type*,*Xlist*,[,*freqlist*,*colour#*])

Used as the "type" argument in the command

Where # gives Plot1, Plot2 or Plot3.

† 2nd [stat plot]
TYPE

Z

ZBox

ZBox

Displays a graph, lets you draw a box that defines a new viewing window, and updates the window.

† ZOOM
ZOOM
1:ZBox

ZDecimal

ZDecimal

Adjusts the viewing window so that **TraceStep=0.1**, Δ**X=0.5** and Δ**Y=0.5**, and displays the graph screen with the origin centred on the screen.

† ZOOM
ZOOM
4:ZDecimal

ZFrac1/2

ZFrac1/2

Sets the window variables so that you can trace in increments of $\frac{1}{2}$, if possible. Sets **TraceStep** to $\frac{1}{2}$ and Δ**X** and Δ**Y** to $\frac{1}{4}$.

ZOOM
ZOOM
B:ZFrac1/2

ZFrac1/3

ZFrac1/3

Sets the window variables so that you can trace in increments of $\frac{1}{3}$, if possible. Sets **TraceStep** to $\frac{1}{3}$ and Δ**X** and Δ**Y** to $\frac{1}{6}$.

ZoomSto

ZoomSto

Immediately stores the current viewing window.

† [ZOOM]
MEMORY
2:ZoomSto

ZPrevious

ZPrevious

Replots the graph using the window variables of the graph that was displayed before you executed the last **ZOOM** instruction.

† [ZOOM]
MEMORY
1:ZPrevious

ZQuadrant1

ZQuadrant1

Displays the portion of the graph that is in quadrant 1.

[ZOOM]
ZOOM
A:ZQuadrant1

ZSquare

ZSquare

Adjusts the **X** or **Y** window settings so that each pixel represents an equal width and height in the coordinate system, and updates the viewing window.

† [ZOOM]
ZOOM
5:ZSquare

ZStandard

ZStandard

Replots the functions immediately, updating the window variables to the default values.

† [ZOOM]
ZOOM
6:ZStandard

Z-Test(

Z-Test($\mu 0$,σ **[,***listname*,*freqlist*,*alternative*,*drawflag*,*colour#***])**
(Data list input)

† STAT
TESTS
1:Z-Test(

Performs a *z* test with frequency *freqlist*. *alternative*=**−1** is **<**; *alternative*=**0** is ; *alternative*=**1** is **>**. *drawflag*=**1** draws results; *drawflag*=**0** calculates results.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

Z-Test(

Z-Test($\mu 0$,σ,$\bar{x}$,*n***[,***alternative*,*drawflag*,*colour#***])**
(Summary stats input)

† STAT
TESTS
1:Z-Test(

Performs a *z* test. *alternative*=**−1** is **<**; *alternative*=**0** is ; *alternative*=**1** is **>**. *drawflag*=**1** draws results; *drawflag*=**0** calculates results.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

ZTrig

ZTrig

† ZOOM
ZOOM
7:ZTrig

Replots the functions immediately, updating the window variables to preset values for plotting trig functions.

Arithmetic Operations, Test Relations and Symbols

! (factorial)

Factorial: *value*!

Returns factorial of *value*.

MATH
PRB
4:!

! (factorial)

Factorial: *list*!

Returns factorial of *list* elements.

MATH
PRB
4:!

° (degrees notation)

Degrees notation: *value*°

Interprets *value* as degrees; designates degrees in DMS format.

2nd [ANGLE]
ANGLE
1: °

r (radian)

Radian: *angle*r

Interprets *angle* as radians.

2nd [ANGLE]
ANGLE
3:r

T (transpose)

Transpose: *matrix*T

Returns a matrix in which each element (row, column) is swapped with the corresponding element (column, row) of *matrix*.

2nd [MATRIX]
MATH
2: T

x√

$x^{th}root\sqrt[x]{}value$

Returns $x^{th}root$ of *value*.

MATH
MATHS
5: $\sqrt[x]{}$

x√(

$x^{th}root\sqrt[x]{}list$

MATH

$\sqrt[x]{}$(

Returns x^{th} *root* of *list* elements.

MATHS
5: $\sqrt[x]{}$

$\sqrt[x]{}$(

list $\sqrt[x]{}$ *value*

Returns *list* roots of *value*.

[MATH]
MATHS
5: $\sqrt[x]{}$

$\sqrt[x]{}$(

listA $\sqrt[x]{}$ *listB*

Returns *listA* roots of *listB*.

[MATH]
MATHS
5: $\sqrt[x]{}$

3 (cube)

Cube: *value*^{3}

Returns the cube of a real or complex number, expression, list, or square matrix.

[MATH]
MATHS
3: ^{3}

$\sqrt[3]{}$((cube root)

Cube root: $\sqrt[3]{}$(*value*)

Returns the cube root of a real or complex number, expression, or list.

[MATH]
MATHS
4: $\sqrt[3]{}$ (

= (equal)

Equal:
valueA=*valueB*

Returns 1 if *valueA* = *valueB*. Returns 0 if *valueA* *valueB*. *valueA* and *valueB* can be real or complex numbers, expressions, lists, or matrices.

[2nd] [TEST]
TEST
1:=

≠ (not equal)

Not equal:
valueA≠*valueB*

Returns 1 if *valueA* ≠ *valueB*. Returns 0 if *valueA* = *valueB*. *valueA* and *valueB* can be real or complex numbers, expressions, lists, or matrices.

2nd [TEST]
TEST
2: ≠

< (less than)

Less than:
valueA<*valueB*

Returns 1 if *valueA* < *valueB*. Returns 0 if *valueA* ≥ *valueB*. *valueA* and *valueB* can be real or complex numbers, expressions, or lists.

2nd [TEST]
TEST
5:<

> (greater than)

Greater than:
valueA>*valueB*

Returns 1 if *valueA* > *valueB*. Returns 0 if *valueA* ≤ *valueB*. *valueA* and *valueB* can be real or complex numbers, expressions, or lists.

2nd [TEST]
TEST
3:>

≤ (less or equal)

Less than or equal:
valueA≤*valueB*

Returns 1 if *valueA* ≤ *valueB*. Returns 0 if *valueA* > *valueB*. *valueA* and *valueB* can be real or complex numbers, expressions, or lists.

2nd [TEST]
TEST
6: ≤

≥ (greater or equal)

Greater than or equal:
valueA≥*valueB*

Returns 1 if *valueA* ≥ *valueB*. Returns 0 if *valueA* < *valueB*. *valueA* and *valueB* can be real or complex numbers, expressions, or lists.

2nd [TEST]
TEST
4: ≥

$^{-1}$ (inverse)

Inverse: *value*$^{-1}$

Returns 1 divided by a real or complex number or expression.

x^{-1}

$^{-1}$ (inverse)

Inverse: $list^{-1}$ 

Returns 1 divided by *list* elements.

$^{-1}$ (inverse)

Inverse: $matrix^{-1}$ 

Returns *matrix* inverted.

^{2} (square)

Square: $value^2$ 

Returns *value* multiplied by itself. *value* can be a real or complex number or expression.

^{2} (square)

Square: $list^2$ 

Returns *list* elements squared.

^{2} (square)

Square: $matrix^2$ 

Returns *matrix* multiplied by itself.

^ (power)

Powers: *value*^*power* 

Returns *value* raised to *power*. *value* can be a real or complex number or expression.

^ (power)

Powers: *list*^*power* 

Returns *list* elements raised to *power*.

^ (power)

Powers: *value*^*list* [^]

Returns *value* raised to *list* elements.

^ (power)

Powers: *matrix*^*power* [^]

Returns *matrix* elements raised to *power*.

⁻ (negation)

Negation: ⁻*value* [(-)]

Returns the negative of a real or complex number, expression, list, or matrix.

10^((power of ten)

Power of ten: 10^(*value***)** [2nd] [10^x]

Returns 10 raised to the *value* power. *value* can be a real or complex number or expression.

10^((power of ten)

Power of ten: 10^(*list***)** [2nd] [10^x]

Returns a list of 10 raised to the *list*

√((square root)

Square root: √(*value***)** [2nd] [$\sqrt{}$]

Returns square root of a real or complex number, expression, or list.

✱ (multiply)

Multiplication: [×]
valueA✱*valueB*

Returns *valueA* times *valueB*.

✱ (multiply)

Multiplication: [×]

✱ (multiply)

value✱*list*

Returns *value* times each *list* element.

✱ (multiply)

Multiplication: ⊠
list✱*value*

Returns each *list* element times *value*.

✱ (multiply)

Multiplication: ⊠
listA✱*listB*

Returns *listA* elements times *listB* elements.

✱ (multiply)

Multiplication: ⊠
value✱*matrix*

Returns value times *matrix* elements.

✱ (multiply)

Multiplication: ⊠
matrixA✱*matrixB*

Returns *matrixA* times *matrixB*.

/ (divide)

Division: *valueA*/*valueB* ÷

Returns *valueA* divided by *valueB*

/ (divide)

Division: *list*/*value* ÷

Returns *list* elements divided by value.

/ (divide)

Division: *value*/*list* ÷

/ (divide)

Returns value divided by *list* elements.

/ (divide)

Division: *listA*/*listB* ÷

Returns *listA* elements divided by *listB* elements.

+ (add)

Addition: *valueA*+*valueB* +

Returns *valueA* plus *valueB*.

+ (add)

Addition: *list*+*value* +

Returns list in which *value* is added to each *list* element.

+ (add)

Addition: *listA*+*listB* +

Returns *listA* elements plus *listB* elements.

+ (add)

Addition:
matrixA+*matrixB* +

Returns *matrixA* elements plus *matrixB* elements.

+ (concatenation)

Concatenation:
string1+*string2*

Concatenates two or more strings.

− (subtract)

Subtraction:
valueA−*valueB*

Subtracts *valueB* from *valueA*.

− (subtract)

Subtraction:
value−*list*

Subtracts *list* elements from *value*

− (subtract)

Subtraction:
list−*value*

Subtracts *value* from *list* elements.

− (subtract)

Subtraction:
listA−*listB*

Subtracts *listB* elements from *listA* elements.

− (subtract)

Subtraction:
matrixA−*matrixB*

Subtracts *matrixB* elements from *matrixA* elements.

' (minutes notation)

Minutes notation:*degrees*°*minutes*'*seconds*"

2nd [ANGLE]
ANGLE
2:'

Interprets *minutes* angle measurement as minutes.

" (seconds notation)

Seconds notation:
degrees°*minutes*'*seconds*"

ALPHA ["]

Interprets *seconds* angle measurement as seconds.

Error Messages

When the TI-84 Plus CE detects an error, it returns an error message as a menu title, such as **ERR:SYNTAX** or **ERR:DOMAIN**. This table contains each error type, possible causes, and suggestions for correction. The error types listed in this table are each preceded by **ERR:** on your graphing calculator display. For example, you will see **ERR:ARCHIVED** as a menu title when your graphing calculator detects an **ARCHIVED** error type.

ERROR TYPE	Possible Causes and Suggested Remedies
ARCHIVED	You have attempted to use, edit, or delete an archived variable. For example, the expression dim(L1) produces an error if L1 is archived.
ARCHIVE FULL	You have attempted to archive a variable and there is not enough space in archive to receive it.
ARGUMENT	A function or instruction does not have the correct number of arguments. The arguments are shown in italics. The arguments in brackets are optional and you need not type them. You must also be sure to separate multiple arguments with a comma (,). For example, **stdDev(***list*[,*freqlist*]**)** might be entered as stdDev(L1) or stdDev(L1,L2) since the frequency list or *freqlist* is optional.
BAD ADDRESS	You have attempted to send or receive an application and an error (e.g. electrical interference) has occurred in the transmission.
BAD GUESS	In a **CALC** operation, you specified a **Guess** that is not between **Left Bound** and **Right Bound**. For the **solve(** function or the equation solver, you specified a *guess* that is not between *lower* and *upper*. Your guess and several points around it are undefined. Examine a graph of the function. If the equation has a solution, change the bounds and/or the initial guess.
BOUND	In a **CALC** operation or with **Select(**, you defined **Left Bound > Right Bound**. In **fMin(**, **fMax(**, **solve(**, or the equation solver, you entered *lower upper*.
BREAK	You pressed the [ON] key to break execution of a programme, to halt a **DRAW** instruction, or to stop evaluation of an expression.
DATA TYPE	You entered a value or variable that is the wrong data type. For a function (including implied multiplication) or an instruction, you entered an argument that is an invalid data type, such as a complex number where a real number is

ERROR TYPE	Possible Causes and Suggested Remedies
	required. In an editor, you entered a type that is not allowed, such as a matrix entered as an element in the stat list editor. You attempted to store an incorrect data type, such as a matrix, to a list. You attempted to enter complex numbers into the n/d MathPrint™ template.
DIMENSION MISMATCH	Your calculator displays the **ERR:DIMENSION MISMATCH** error if you are trying to perform an operation that references one or more lists or matrices whose dimensions do not match. For example, multiplying L1*L2, where L1={1,2,3,4,5} and L2={1,2} produces an **ERR:DIMENSION MISMATCH** error because the number of elements in L1 and L2 do not match. You may need to turn Plots Off to continue.
DIVIDE BY 0	You attempted to divide by zero. This error is not returned during graphing. The TI-84 Plus CE allows for undefined values on a graph. • You attempted a linear regression with a vertical line.
DOMAIN	You specified an argument to a function or instruction outside the valid range. The TI-84 Plus CE allows for undefined values on a graph. You attempted a logarithmic or power regression with a $^-$**X** or an exponential or power regression with a $^-$**Y**. You attempted to compute Σ**Prn(** or Σ**Int(** with $pmt2 < pmt1$.
DUPLICATE	You attempted to create a duplicate group name.
Duplicate Name	A variable you attempted to transmit cannot be transmitted because a variable with that name already exists in the receiving unit.
EXPIRED	You have attempted to run an application with a limited trial period which has expired.
Error in Xmit	The TI-84 Plus CE was unable to transmit an item. Check to see that the cable is firmly connected to both units and that the receiving unit is in receive mode. You pressed [ON] to break during transmission. Setup RECEIVE first and then SEND, when sending files ([LINK]) between graphing calculators.
ID NOT FOUND	This error occurs when the SendID command is executed but the proper graphing calculator ID cannot be found.
ILLEGAL	You attempted to use an invalid function in an argument to

ERROR TYPE	Possible Causes and Suggested Remedies
NEST	a function, such as **seq(** within *expression* for **seq(**.
INCREMENT	The increment, step, in **seq(** is 0 or has the wrong sign. . The TI-84 Plus CE allows for undefined values on a graph. The increment in a **For(** loop is 0.
INVALID	You attempted to reference a variable or use a function where it is not valid. For example, **Y***n* cannot reference **Y**, **Xmin**, **ΔX**, or **TblStart**. In **Seq** mode, you attempted to graph a phase plot without defining both equations of the phase plot. In **Seq** mode, you attempted to graph a recursive sequence without having input the correct number of initial conditions. In **Seq** mode, you attempted to reference terms other than **(***n***−1)** or **(***n***−2)**. You attempted to designate a graph style that is invalid within the current graph mode. You attempted to use **Select(** without having selected (turned on) at least one xyLine or scatter plot.
INVALID DIMENSION	The **ERR:INVALID DIMENSION** error message may occur if you are trying to graph a function that does not involve the stat plot features. The error can be corrected by turning off the stat plots. To turn the stat plots off, press 2nd [STAT PLOT] and then select **4:PlotsOff**. You specified a list dimension as something other than an integer between 1 and 999. You specified a matrix dimension as something other than an integer between 1 and 99. You attempted to invert a matrix that is not square.
ITERATIONS	The **solve(** function or the equation solver has exceeded the maximum number of permitted iterations. Examine a graph of the function. If the equation has a solution, change the bounds, or the initial guess, or both. **irr(** has exceeded the maximum number of permitted iterations. When computing **I**%, the maximum number of iterations was exceeded.
LABEL	The label in the **Goto** instruction is not defined with a **Lbl** instruction in the program.
LINK L1 (or any other file) to Restore	The calculator has been disabled for testing. To restore full functionality, use TI Connect™ CE software to download a file to your calculator from your computer, or transfer any file to your calculator from another TI-84 Plus CE.

ERROR TYPE	Possible Causes and Suggested Remedies
MEMORY	Memory is insufficient to perform the instruction or function. You must delete items from memory before executing the instruction or function. Recursive problems return this error; for example, graphing the equation **Y1=Y1**. Branching out of an **If**/**Then**, **For(**, **While**, or **Repeat** loop with a **Goto** also can return this error because the **End** statement that terminates the loop is never reached. Attempting to create a matrix with larger than 400 cells.
MemoryFull	You are unable to transmit an item because the receiving unit's available memory is insufficient. You may skip the item or exit receive mode. During a memory backup, the receiving unit's available memory is insufficient to receive all items in the sending unit's memory. A message indicates the number of bytes the sending unit must delete to do the memory backup. Delete items and try again.
MODE	You attempted to store to a window variable in another graphing mode or to perform an instruction while in the wrong mode; for example, **DrawInv** in a graphing mode other than **Func**.
NO SIGN CHANGE	The **solve(** function or the equation solver did not detect a sign change. You attempted to compute I% when **FV**, (**N** **PMT**), and **PV** are all 0, or when **FV**, (**N** **PMT**), and **PV** are all 0. You attempted to compute **irr(** when neither $CFList$ nor CFO is > 0, or when neither $CFList$ nor CFO is < 0.
NONREAL ANSWERS	In **Real** mode, the result of a calculation yielded a complex result. . The TI-84 Plus CE allows for undefined values on a graph.
OVERFLOW	You attempted to enter, or you have calculated, a number that is beyond the range of the graphing calculator. The TI-84 Plus CE allows for undefined values on a graph.
RESERVED	You attempted to use a system variable inappropriately.
SINGULAR MATRIX	A singular matrix (determinant = 0) is not valid as the argument for $^{-}$**1**. The **SinReg** instruction or a polynomial regression generated a singular matrix (determinant = 0) because the algorithm could not find a solution, or a solution does not exist. The TI-84 Plus CE allows for undefined values on a graph.

ERROR TYPE	Possible Causes and Suggested Remedies
SINGULARITY	*expression* in the **solve(** function or the equation solver contains a singularity (a point at which the function is not defined). Examine a graph of the function. If the equation has a solution, change the bounds or the initial guess or both.
STAT	You attempted a stat calculation with lists that are not appropriate. Statistical analyses must have at least two data points. **Med-Med** must have at least three points in each partition. When you use a frequency list, its elements must be 0. (**Xmax** − **Xmin**) ⁄ **Xscl** must be between 0 and 131 for a histogram.
STAT PLOT	You attempted to display a graph when a stat plot that uses an undefined list is turned on.
SYNTAX	The command contains a syntax error. Look for misplaced functions, arguments, parentheses, or commas. For example, **stdDev(***list*[,*freqlist*]**)** is a function of the TI-84 Plus CE. The arguments are shown in italics. The arguments in brackets are optional and you need not type them. You must also be sure to separate multiple arguments with a comma (,). For example **stdDev(***list* [,*freqlist*]**)** might be entered as stdDev(L1) or stdDev(L1,L2) since the frequency list or *freqlist* is optional.
TOLERANCE NOT MET	You requested a tolerance to which the algorithm cannot return an accurate result.
UNDEFINED	You referenced a variable that is not currently defined. For example, you referenced a stat variable when there is no current calculation because a list has been edited, or you referenced a variable when the variable is not valid for the current calculation, such as **a** after **Med-Med**.
VALIDATION	Electrical interference caused a link to fail or this graphing calculator is not authorised to run the application.
VARIABLE	You have tried to archive a variable that cannot be archived or you have tried to unarchive an application or group. Examples of variables that cannot be archived include: Real numbers **LRESID, R, T, X, Y**, **Theta**, Statistic variables under **Vars**, **STATISTICS** menu, **Yvars**, and the **AppIdList**.
VERSION	You have attempted to receive an incompatible variable version from another graphing calculator. A programme may contain commands not supported in the OS version on your graphing calculator. Always use the

ERROR TYPE	Possible Causes and Suggested Remedies
	latest OS. TI-84 Plus CE and TI-84 Plus share programs but a version error will be given if any new TI-84 Plus CE programmes may need to be adjusted for the high resolution graph area.
WINDOW RANGE	A problem exists with the window variables. You defined **Xmax Xmin** or **Ymax Ymin**. You defined θ**max** θ**min** and θ**step** > **0** (or vice versa). You attempted to define **Tstep=0**. You defined **Tmax** **Tmin** and **Tstep** > **0** (or vice versa). Window variables are too small or too large to graph correctly. You may have attempted to zoom to a point that exceeds the TI-84 Plus CE's numerical range.
ZOOM	A point or a line, instead of a box, is defined in **ZBox.** A **ZOOM** operation returned a maths error.
