## Problem 1 - Chord-Chord Product Theorem

Page 1.3 shows circle $O$ and two chords $A B$ and $C D$ that intersect at point $X$. The lengths $A X$, $B X, C X$, and $D X$ are also given.

1. Move point $A$ to four different points and collect the data in the table below and calculate the products $\boldsymbol{A X} \cdot \boldsymbol{B X}$ and $\boldsymbol{C X} \cdot \boldsymbol{D X}$.

| Position | $A X$ | $B X$ | $C X$ | $D X$ | $A X \cdot B X$ | $C X \cdot D X$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 |  |  |  |  |  |  |
| 2 |  |  |  |  |  |  |
| 3 |  |  |  |  |  |  |
| 4 |  |  |  |  |  |  |

2. What do you notice about the products $\boldsymbol{A X} \cdot \boldsymbol{B X}$ and $\mathbf{C X} \cdot \boldsymbol{D X}$ ?
3. If two chords intersect in the interior of a circle, then the product of the lengths of the segments of one chord is $\qquad$ to the product of the lengths of the segments of the other chord.

## Problem 2 - Secant-Secant Product Theorem

Page 2.2 shows circle $O$ and two chords $A B$ and $C D$ that intersect at point $X$. The lengths $A X$, $B X, C X$, and $D X$ are also given.
4. Move point $A$ to four different points and collect the data in the table below and calculate the products $\boldsymbol{A X} \cdot \boldsymbol{B X}$ and $\boldsymbol{C X} \cdot \boldsymbol{D X}$.

| Position | $A X$ | $B X$ | $C X$ | $D X$ | $A X \cdot B X$ | $C X \cdot D X$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 |  |  |  |  |  |  |
| 2 |  |  |  |  |  |  |
| 3 |  |  |  |  |  |  |
| 4 |  |  |  |  |  |  |

5. What do you notice about the products $\boldsymbol{A X} \cdot \boldsymbol{B X}$ and $\boldsymbol{C X} \cdot \boldsymbol{D X}$ ?
6. If two secant segments share the same endpoint outside of a circle, then the product of the lengths of one secant segment and its external segment $\qquad$ the product of the lengths of the other secant segment and its external segment.

## Circle Product Theorems

## Problem 3 - Secant-Tangent Product Theorem

Page 3.2 shows circle $O$ and two chords $A B$ and $C D$ that intersect at point $X$. The lengths $A X$, $C X$, and $D X$ are also given.
7. Move point $A$ to four different points and collect the data in the table below and calculate $A X^{2}$ and $C X \cdot D X$.

| Position | $A X$ | $C X$ | $D X$ | $A X^{2}$ | $C X \cdot D X$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 |  |  |  |  |  |
| 2 |  |  |  |  |  |
| 3 |  |  |  |  |  |
| 4 |  |  |  |  |  |

8. What do you notice about the products $\boldsymbol{A} \boldsymbol{X}^{2}$ and $\boldsymbol{C X} \cdot \boldsymbol{D X}$ ?
9. If a secant segment and a tangent segment share an endpoint outside of a circle, then the product of the lengths of the secant segment and its external segment $\qquad$ the square of the length of the tangent segment.

## Problem 4 - Application of Product Theorems

10. Find the value of $x$.

11. Find the value of $x$.

12. Find the value of $x$.
