# $\mathcal{H o w}$ Far to Your Birthplace Collecting and Analyzing One-Variable Data 

$\mathcal{A b s t r a c t : ~ C o n t i n u e s ~ o n e - v a r i a b l e ~ d a t a ~ a n a l y s i s ~ t h r o u g h ~ t h e ~ c r e a t i o n ~ a n d ~ e x p l o r a t i o n ~ o f ~ a ~ b i r t h ~ p l a c e ~}$ data set. Graphing calculators are used to analyze the data through mean, median, mode, maximum, minimum, stem-and-le af plots and box-and-whisker plots.

California Mathematics Content $\operatorname{S}$ tandards addressed by this $\mathfrak{A c t i v i t y}$ $5^{\text {th }}$ grade

- Algebra 1.1-Information from grapf
- Statistics and Data Analys is 1.1, 1.4-Me an, median and mode
$6^{\text {th }}$ grade
- Statistics and Data Analysis 1.1- Mean, median and mode
$7^{\text {th }}$ grade
- Statistics and Data Analysis 1.0-1.2-Collect, organize, represent data of one or more variable
Algebra I
- Standard 17.0-Range of data

## Preceding Activity

Students would have to have some knowle dge of using scale to determine distance on a map. Preceding activities would include a discussion on fow to organize data.

## Activity Agenda, Teacker $\mathcal{N}$ (otes and Points for $\operatorname{Disc}$ ussion

Teacher will...
Student will...

| 1. Provide measuring tapes, map of the US, map of California, severalglobes | Locate their birthplace, calculate the distance from school to the ir birthplace (chose miles or Kilometers - whichever is appropriate for your class) Record data on group work sheet |
| :---: | :---: |
| 2. Ask one group member to record group data items into L1 of teacher's graphing calculator | Put in data from group into grapfing calculator |
| 3. When all groups fave entered data in calculator attached to LCD panel, have students clear their list memory. <br> Encourage each student to receive the data then send the data to someone else in their group. | One student from each group will download data from teacher calculator to their calculator and send that information to other group member's calculators. |
| 4. Show students how to use the calculator functions of minimum, maximum, me an and me dian of the data. | Find minimum, maximum, mean and median of the class'data. |
| 5. Show how to make box and whisker plot. Before graphing, check $\langle y=>$ to make sure there are no equations entered -you only want to graph what is in the list. (see worksheets) | Make a 6ox-and-whisker plot. |
| 6. Form a fuman box-and-whisker plot. <br> Ulsing <Irace>identify lower extreme data then have that student stand with the end of one rope. Continue process with lower quartile other end of rope and meter stick on the floor perpendicular to the rope, median, upper quartile and upper extreme. When the boundaries have been identified, students will place themselves in their respective quartiles (a picture of the group would be nice!) | Participate in the fuman box-and-whisker plot. |

$$
\mathcal{F o l l o w - U p} \operatorname{Activity(ies)}
$$

$\mathcal{A d d i t i o n a l}$ assignments could be to collect data and make other representations for the data.

Possible Extensions/Changes to this Activity

The teacher could use $\mathcal{T} I-\mathcal{N}$ avigator to collect data from students and send it back to the class.
