# Humidity makes air feel even hotter

High temperatures combined with humidity not only provide uncomfortable conditions, but they can be deadly. Humidity reduces the amount of evaporation of sweat, which makes it difficult for the body to cool. A person might suffer heat-related illnesses, such as heat cramps or heat strokes, if he or she were exposed to such heat for an extended period of time.

Extreme danger
130° and above
Heat stroke imminent

Danger
105°-129°
Heat exhaustion likely

Extreme caution
90°-104°
Heat cramps, Heat exhaustion possible

Caution
80°-89°
Exercise more tiring than usual

Relative humidity
(the amount of water in the air compared with the amount of water the air can hold at that temperature)
