## Move to page 1.2.

$\triangle A B^{\prime} C^{\prime}$ was constructed by dilating $\triangle A B C$ through point $A$ with the given scale factor of 2 . Therefore, $\triangle A B C \sim \triangle A B^{\prime} C^{\prime}$.

1. Move point $A$. Describe the changes that occur as you move the point.
2. Suppose that point $A$ is moved such that the measure of $\overline{A B}$ is $5, \overline{B C}$ is 7 , and $\overline{A C}$ is 4 . What would the measures be for each of the corresponding segments on $\triangle A B^{\prime} C^{\prime}$ ? Justify your answer.
$A B^{\prime}=$ $\qquad$ $B^{\prime} C^{\prime}=$ $\qquad$ $A C^{\prime}=$ $\qquad$
3. Complete the table below by moving point $A$ to three locations.

| Scale Factor 2 | Similar $\Delta ' s$ Pair 1 | Similar ''s Pair 2 $^{\prime}$ | Similar ''s Pair 3 $^{\prime}$ |
| :--- | :--- | :--- | :--- |
| Perimeter $\triangle A B C$ |  |  |  |
| Perimeter $\triangle A B^{\prime} C^{\prime}$ |  |  |  |
| Area $\triangle A B C$ |  |  |  |
| Area $\triangle A B^{\prime} C^{\prime}$ |  |  |  |

4. Use the measurements recorded in the table above to make relative comparisons of the perimeters of $\triangle A B C$ and $\triangle A B^{\prime} C^{\prime}$.
$\qquad$
5. Use the measurements recorded in the table to make relative comparisons of the areas of $\triangle A B C$ and $\triangle A B^{\prime} C^{\prime}$.
6. Predict what will happen to the relative comparisons of the perimeters and areas if the scale factor is changed.
7. To complete the table below, do the following:
a. Change the scale factor to 3 and move point $A$ to three different locations.
b. Change the scale factor to $\frac{3}{4}$ and move point $A$ to three different locations.

| 1.1 | 1.2 | Scale_F..rev |
| :---: | :---: | :---: |
| S.F. $=0.75$ |  |  |
| Area $A B C=$ |  |  |
| $26.2 \mathrm{~cm}^{2}$ |  |  |

To change the scale factor, move the cursor over the current scale factor of 2 located in the upper-left corner of the screen. Doubleclick. The cursor is now inside the text box. Press (del) and type the new scale factor. Then press enter.

| Scale Factor 3 | Similar $\triangle$ 's Pair 1 | Similar $\triangle$ 's Pair 2 | Similar $\triangle$ 's Pair 3 |
| :--- | :--- | :--- | :--- |
| Perimeter $\triangle A B C$ |  |  |  |
| Perimeter $\triangle A B^{\prime} C^{\prime}$ |  |  |  |
| Area $\triangle A B C$ |  |  |  |
| Area $\triangle A B^{\prime} C^{\prime}$ |  |  |  |

| Scale Factor $\frac{\mathbf{3}}{\mathbf{4}}$ | Similar $\triangle$ 's Pair 1 | Similar $\triangle$ 's Pair 2 | Similar $\triangle$ 's Pair 3 |
| :--- | :--- | :--- | :--- |
| Perimeter $\triangle A B C$ |  |  |  |
| Perimeter $\triangle A B^{\prime} C^{\prime}$ |  |  |  |
| Area $\triangle A B C$ |  |  |  |
| Area $\triangle A B^{\prime} C^{\prime}$ |  |  |  |

$\qquad$
8. Using the perimeter and area measurements recorded for $\triangle A B C$ above for Similar $\triangle$ 's Pair 1, give the following measurements for $\Delta A B^{\prime} C^{\prime}$ if the scale factor is 5 .

Perimeter $\triangle A B^{\prime} C^{\prime}=$ $\qquad$ ; Area $\triangle A B^{\prime} C^{\prime}=$ $\qquad$ .
9. Make a conjecture about the relative comparison of the perimeters of the similar triangles if the scale factor is $r$.
10. Make a conjecture about the relative comparison of the areas of the similar triangles if the scale factor is $r$.
