## Slope-Intercept <br> Teacher Notes

Prerequisite Knowledge: Finding the slope between two points, solving literal equations, graphing using a point and the slope.

Objective: Students will see the relationship between the slope-intercept form of an equation, and the graph.

## Warm Up:

1. Find the slope between the following pairs of points ( 0,3 ) and ( $2,-4$ ); ( $-1,-2$ ) and ( $-3,-6$ )
2. Solve the following equation for $\mathrm{y}: 3 x-2 y=0$

Procedure: In pairs, students will graph a variety of equations and using the graph they will find the $y$-intercept, and another point of the line. Students will then find the slope of the line. By answering the questions and participating in a class discussion they will see the relationship between the graph and the equation.

Materials Needed: Students will need an activity sheet and a graphing calculator.
$\qquad$

## Algebra 1

Graphing Linear Equations
For the following equations:

1. Solve each equation for $y$ if it is in standard form.
2. Then both partners will graph the equation with their calculator.
3. Use Trace to find the $y$-intercept.
4. Use Trace to find another point on the line.
(For steps 3 and 4 it will help to use zoom decimal, or if needed zoom decimal, then zoom integer then enter.)
5. Using the two points find the slope of the line.
6. $y=-\frac{8}{2} x-1$
$y$-intercept $\qquad$
Point $\qquad$
Slope $\qquad$
7. $y=-\frac{1}{2}+3$
$y$-intercept $\qquad$
Point $\qquad$
Slope $\qquad$
8. $y=2 x-2$
$y$-intercept $\qquad$
Point $\qquad$
Slope $\qquad$
9. $4 x-3 y=15$
y-intercept $\qquad$
Point $\qquad$
Slope $\qquad$
10. $-7 x+2 y=-8$
y-intercept $\qquad$
Point $\qquad$
Slope $\qquad$

Questions:

1. Do you notice anything about the equation when it is solved for $y$ ? What do you see?
2. Could you graph an equation without finding the intercepts or making a table? Describe the process.

Practice:
Find the slope and $y$-intercept of each equation.

1. $y=-\frac{3}{4} x-2$
2. $x-3 y=9$
3. $-2 x-6 y=-18$
4. $-\frac{1}{4} x+\frac{1}{2} y=-2$
5. $7 x-3 y=12$
