

Topics in Calculus: Prerequisites: Functions and Equations

Piecewise Defined Functions

NCTM Principles and Standards

- **Content Standard:** Represent and analyze mathematical situations and structures using algebraic symbols
- **Process Standard:** Use representations to model and interpret physical, social, and mathematical phenomena

The ability to graph piecewise defined functions is a basic skill necessary for students studying calculus. The syntax for graphing piecewise functions on the TI-89 is a bit different from the TI-83 Plus. The TI-89 has the “such that” symbol $\boxed{1}$ immediately to the left of the $\boxed{7}$ key.

To graph the piecewise defined function $y = \begin{cases} -x, & x < 0 \\ x^2, & 0 \leq x \leq 1 \\ x, & x > 1 \end{cases}$

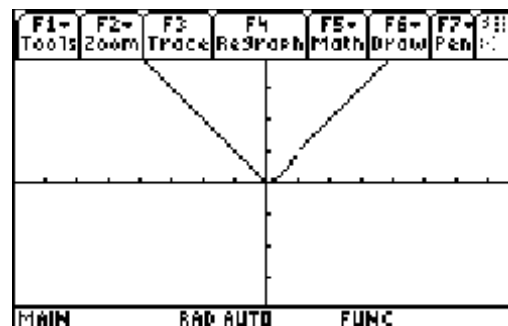

- Press \blacklozenge $\boxed{F1}$ to access the y= menu. Enter the function by typing the function, $\boxed{1}$, and the domain for that piece of the function. The symbols < and > are accessed by pressing $\boxed{2nd}\boxed{0}$ and $\boxed{2nd}\boxed{}$ respectively.

- The symbols for \leq and \geq are found in the MATH folder. To access those symbols press $\boxed{2nd}\boxed{5}\boxed{8}\boxed{ENTER}$ (or \blacklozenge $\boxed{3}$ or \blacklozenge $\boxed{4}$). Notice that and/or is also found on this menu. Press \blacklozenge to see the items at the bottom of the list. And/or may also be found in the catalog.

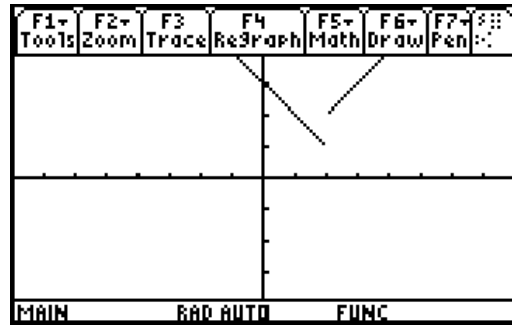

- To define the window press \blacklozenge $\boxed{F2}$ and enter appropriate values. Graph the function by pressing \blacklozenge $\boxed{F3}$.

Graph the following piecewise defined functions:

$$1. y = \begin{cases} 3-x, & x \leq 2 \\ x, & x > 2 \end{cases}$$

$$2. y = \begin{cases} 2-x^2, & x < 1 \\ x+2, & 1 \leq x \leq 2 \\ x-3, & x > 2 \end{cases}$$

$$3. y = \begin{cases} -x+2, & x < -1 \\ -x^2, & -1 \leq x \leq 2 \\ x-3, & x > 2 \end{cases}$$
