

**EXAMPLE 2** Approximate the zeros of a function

Approximate the zeros of the function  $y = 3x^2 + 2x - 4$ .

**STEP 1 Enter the function**

Press **Y=** and enter the function  $y = 3x^2 + 2x - 4$ .

```
Y1=3X^2+2X-4
Y2=
Y3=
Y4=
Y5=
Y6=
Y7=
```

**STEP 2 Adjust the window**

Display the graph. Adjust the viewing window as needed so that the  $x$ -intercepts of the parabola are visible.

```
WINDOW
Xmin=-5
Xmax=5
Xscl=1
Ymin=-10
Ymax=10
Yscl=1
```

**STEP 3 Use the zero feature**

The *zero* feature is under the CALCULATE menu.

```
CALCULATE
1:value
2:zero
3:minimum
4:maximum
5:intersect
6:dy/dx
```

**STEP 4 Find the zeros**

Follow the graphing calculator's procedure to find a zero of the function. Then repeat the process to find the other zero.

- The zeros are about  $-1.54$  and about  $0.87$ .

**PRACTICE**

Approximate the zeros of the quadratic function to the nearest hundredth.

- |                                |                                  |
|--------------------------------|----------------------------------|
| 7. $y = 2x^2 - 5x - 8$         | 8. $y = -3x^2 + 6x - 2$          |
| 9. $y = -x^2 + 4x + 9$         | 10. $y = 4x^2 - 7x + 1$          |
| 11. $y = -2.5x^2 + 7.7x - 4.9$ | 12. $y = 1.56x^2 - 5.19x - 2.25$ |
| 13. $y = -0.82x^2 - 4x + 12.4$ | 14. $y = 5.36x^2 + 17x + 2.67$   |

**DRAW CONCLUSIONS**

15. If a quadratic function has only one zero, what is the maximum or minimum value of the function? *Explain.*
16. If a quadratic function has a maximum value that is greater than 0, how many zeros does the function have? *Explain.*
