

**Problem 1 – What is Average?**

In this activity, you'll investigate different sets of data to find measures of central tendency and compare sets of data.

1. Define mean. \_\_\_\_\_
2. What is the range of a set of numbers? \_\_\_\_\_
3. What is the median of a set of numbers? \_\_\_\_\_
4. Find the following statistics of the list **NHBR**, the salaries of 27 people in a neighborhood.  
Mean: \_\_\_\_\_ Median: \_\_\_\_\_ Range: \_\_\_\_\_  
From the home screen, press **2nd** **LIST** **ENTER** to select 1-Var Stat. Press **2nd** **LIST** and use the arrows to select the list name, **NHBR**.

**1-Var Stats LNHB****R**

5. What is Quartile 1? \_\_\_\_\_ Quartile 3? \_\_\_\_\_
6. What do these numbers represent?  
\_\_\_\_\_
7. What is the median income? What does this mean?  
\_\_\_\_\_
8. Do you think this is a typical neighborhood in the town? Why or why not?  
\_\_\_\_\_

**Problem 2 – Investigating Outliers**

9. Suppose the cashier making \$18,844 gets a contract for his dream contract with the Dallas Mavericks making \$1.1 million. What will happen to the statistics found above?  
\_\_\_\_\_

10. Create a box plot of the original list and sketch it at the right.

11. Change the list and find the new mean, median, and range of the list you modified. Sketch the new box-plot at the right as well.

Mean: \_\_\_\_\_ Median: \_\_\_\_\_ Range: \_\_\_\_\_  
Quartile 1: \_\_\_\_\_ Quartile 3: \_\_\_\_\_

12. Describe how the graph changes from data set one to the modified data. What can you easily tell from the graph?  
\_\_\_\_\_

 **Neighborhood Salaries**

---

**Problem 3 – Investigate Sample Size**

13. Now use list **TOWN** (the entire town's salaries) and find the mean, median and quartiles.

Mean: \_\_\_\_\_ Median: \_\_\_\_\_

Range: \_\_\_\_\_ Quartile 1: \_\_\_\_\_

Quartile 3: \_\_\_\_\_

14. How does the neighborhood compare to the whole city? \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

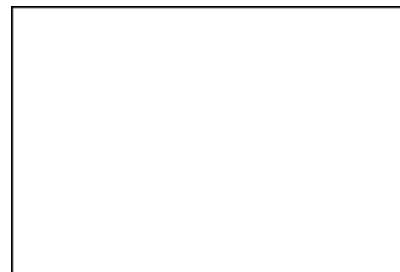

15. Did the neighborhood reflect what the town was like? Yes or no? Explain. \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

**Problem 4 – Using Box-and-Whisker Plots**

16. Create a box-and-whisker plot of the town's salary data.

Press **2nd Y=** and choose a Stat Plot to **1**. Turn the Plot on and set the Type to box-and-whisker **Box**. Select **TOWN** for the Xlist and set 1 for frequency.

Sketch the graph at the right.

17. How does the town graph compare to the neighborhood graph in Question 10?  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

18. If someone uses the original neighborhood data to describe the town to someone in another town, how is it off from the true data of the whole town? (overstate the salary, understate it, and so on)  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_
