## Problem 1 - Exploring Vertex Form

Grab the parabola on page 1.3 by the vertex (the cursor should change to $\ddagger$ ) and move the parabola to each quadrant. The equation will be given in vertex form: $y=(x-h)^{2}+k$.
Record four different equations for the parabola in each quadrant.

| Quadrant I | Quadrant II | Quadrant III | Quadrant IV |
| :---: | :---: | :---: | :---: |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |

Use the vertex form of the equations to answer the questions below.

1. In which quadrants is $h$ positive?
2. In which quadrants is $k$ positive?

## Problem 2 - Happy and Sad Parabolas

On page 2.2, you will see examples of a "happy" parabola and a "sad" parabola. On page 2.4, grab the parabola by one of its branches (the cursor should change to $\%$ ). Make the "happy" parabola wider and narrower by moving farther or closer to the $y$-axis. Make the parabola open down, "sad" by dragging below the $x$-axis. Record four "happy" and four "sad" parabolas.

| "Happy" Parabolas | "Sad" Parabolas |
| :--- | :--- |
|  |  |
|  |  |
|  |  |
|  |  |

3. How does the equation change when the parabola is wider or narrower?

## Around the Vertex in 80 Days

4. For what values of $a$ is the parabola "happy" (opens up) or "sad" (opens down)?
5. Is $f(x)=3.5(x-2)^{2}+5$ a "happy" or "sad" parabola? How do you know?
6. Tell whether the following parabolas open up or down.

$$
\begin{aligned}
& a(x)=2.5 x^{2}-5 \\
& b(x)=6+3(x-3)^{2} \\
& c(x)=-(x-2)^{2}-5 \\
& d(x)=7(x+1)^{2}-1
\end{aligned}
$$

## Extension - Parabola Hunt

For each of the points given on page 3.2, find an equation of a "happy" parabola so that the vertex of the parabola is located at the given point. Then, find an equation of a "sad" parabola at each vertex point. Use integer values for $a, h$, and $k$. Check your work using the sliders on the right side of the screen.

| Point 1 | Point 2 | Point 3 | Point 4 |
| :---: | :---: | :---: | :---: |
|  |  |  |  |
|  |  |  |  |

Compare your equations with a classmate. Using all of your equations listed above, rank the parabolas from widest to narrowest.

Bonus: Find the equation of a parabola that passes through any two of the labeled points on page 3.2.
