

Geoboard App

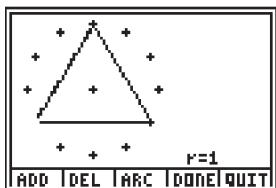

This App provides the ability to measure arcs, line segments, area, and perimeter, as well as rotate, reflect, and translate objects. It makes the TI-73 Explorer an ideal addition to any middle grades mathematics classroom.

**1**

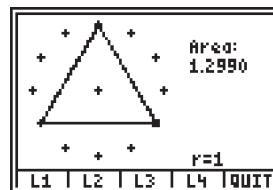

Press [APPS]. Scroll to Geoboard and press [ENTER]. Press any key to access the Geoboard main menu.

**2**

Press **[▼]** once to highlight CIR. Then press [ENTER]. A circular Geoboard is displayed.

**3**

Press the **DRAW** soft key by pressing **Y=**. (**Y=** **WINDOW** **ZOOM** **TRACE** and **GRAPH** refer to the “soft keys” above the actual keys above them on the screen). Now press [**ADD**] **[▼][▼][▼][▼]** [**ADD**]. This will add the first two points of your equilateral triangle. Next, press **[▼][▼][▼][▼]** [**ADD**] [**DONE**] [**QUIT**]. Now you have completed an equilateral triangle.

**4**

To measure the object's area, press [MEAS]. Choose 2:AREA.

5

Place the cursor on one of the points on the triangle and press [ENTER]. The area will appear on the screen. Press [L1] to store the measurement in List 1.

6

To exit the Geoboard App, press [OPTN]. Choose 1:MAIN MENU. Choose 2:YES and then 1:NO. Press **[▼][▼]** to highlight QUIT, then press 2:YES.

The above activity is a small demonstration of what this App can do for any student of geometry. Feel free to explore the other geometric activities and download the manual from the TI website, education.ti.com.
