HS-PS1-3

Students who demonstrate understanding can:

- HS-PS1-3.** **Plan and conduct an investigation to gather evidence to compare the structure of substances at the bulk scale to infer the strength of electrical forces between particles.** [Clarification Statement: Emphasis is on understanding the strengths of forces between particles, not on naming specific intermolecular forces (such as dipole-dipole). Examples of particles could include ions, atoms, molecules, and networked materials (such as graphite). Examples of bulk properties of substances could include the melting point and boiling point, vapor pressure, and surface tension.] [Assessment Boundary: Assessment does not include Raoult's law calculations of vapor pressure.]

The performance expectation above was developed using the following elements from *A Framework for K-12 Science Education*:

Science and Engineering Practices

Planning and Carrying Out Investigations

Planning and carrying out investigations in 9-12 builds on K-8 experiences and progresses to include investigations that provide evidence for and test conceptual, mathematical, physical, and empirical models.

- Plan and conduct an investigation individually and collaboratively to produce data to serve as the basis for evidence, and in the design: decide on types, how much, and accuracy of data needed to produce reliable measurements and consider limitations on the precision of the data (e.g., number of trials, cost, risk, time), and refine the design accordingly.

Disciplinary Core Ideas

PS1.A: Structure and Properties of Matter

- The structure and interactions of matter at the bulk scale are determined by electrical forces within and between atoms.

Crosscutting Concepts

Patterns

- Different patterns may be observed at each of the scales at which a system is studied and can provide evidence for causality in explanations of phenomena.

SCIENTIFIC EXPLANATIONS

CLAIM

Statement about the results of an investigation

- It gives a definite answer to the question you investigated.
- It answers, "what can you conclude?"
- It should not start with "yes" or "no".
- It should describe the relationship between *dependent* and *independent* variables.

EVIDENCE

Scientific data used to support the claim

Evidence must be:

- Sufficient** — Use enough evidence to support the claim.
- Appropriate** — Use data that support your claim. Leave out information that doesn't support the claim.
- Qualitative** — Using the letters of **Qualitative** (sometimes), is a combination of both.

REASONING

Ties together the claim and the evidence

- Explain **how** or **why** the data point as evidence to support the claim.
- Explain the justification for why **this** evidence is important to **this** claim.
- Include one or more **scientific principles** that are important to the claim you investigate.

Remember: Read what you've written to be sure it makes sense as a whole explanation.

Question:

Claim: What is your answer to the question? It should be more than a "yes" or "no".

Reasoning: How does evidence support your claim? What is the science principle that explains why evidence is linked to the claim?

CROSS CUTTING CONCEPTS

-  1. **PATTERNS** – OBSERVED PATTERNS IN NATURE GUIDE ORGANIZATION AND CLASSIFICATION AND PROMPT QUESTIONS ABOUT RELATIONSHIPS AND CAUSES UNDERLYING THEM.
-  2. **CAUSE AND EFFECT** – EVENTS HAVE CAUSES, SOMETIMES SIMPLE, SOMETIMES MULTIFACETED. DECIPHERING CAUSAL RELATIONSHIPS, AND THE MECHANISMS BY WHICH THEY ARE MEDIATED, IS A MAJOR ACTIVITY OF SCIENCE AND ENGINEERING.
3. **SCALE, PROPORTION AND QUANTITY** – IN CONSIDERING PHENOMENA, IT IS CRITICAL TO RECOGNIZE WHAT IS RELEVANT AT DIFFERENT SIZE, TIME, AND ENERGY SCALES, AND TO RECOGNIZE PROPORTIONAL RELATIONSHIPS BETWEEN DIFFERENT QUANTITIES AS SCALES CHANGE.

CROSS CUTTING CONCEPTS

4. **SYSTEMS AND SYSTEM MODELS** – A SYSTEM IS AN ORGANIZED GROUP OF RELATED OBJECTS OR COMPONENTS; MODELS CAN BE USED FOR UNDERSTANDING AND PREDICTING THE BEHAVIOR OF SYSTEMS.

5. **ENERGY AND MATTER** – TRACKING ENERGY AND MATTER FLOWS, INTO, OUT OF, AND WITHIN SYSTEMS HELPS ONE UNDERSTAND THEIR SYSTEM'S BEHAVIOR.

6. **STRUCTURE AND FUNCTION** – GRADES 9-12: THE WAY AN OBJECT IS SHAPED OR STRUCTURED DETERMINES MANY OF ITS PROPERTIES AND FUNCTIONS.
