$\qquad$
$\qquad$

1. Open the document: Cipher_Solvers.tns.

Read the opening screen then move to page 1.2,
Day 1, Strange Message.

Read pages 1.3 through 1.8. Make notes as needed.
2. Move to page 1.9. Decode the message in the space provided below:
3. Read pages 1.10 through 1.13.

On page 1.14, type the five-letter word that is the answer to the riddle and select enter.
4. The screen is changed to the screen shown at the right.

Read and follow the instructions displayed.
Once you are ready to continue, select the esco key to close these instructions.
5. Grab the gray template and drag the template to be on top of the grid of numbers.

## 

Using a Caesar shift of 13 letters,
decode the strange message

Gur oynpx oveq va
gur obbx bs Cbr

Make a note of the five-letter word
that is the answer to this riddle.

$\qquad$
$\qquad$
6. The phrase said, "According to the clock: $0,90,270$." Each of the four numbers in the grid has a letter assigned to it. Write the letter and the number assigned to it for the first orientation below.
$\qquad$
7. With your cursor, select the appropriate button to rotate the template.

Each of the four numbers in the grid have a letter assigned to it. Write the letter and the number assigned to it for the second orientation below.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
8. With your cursor, select the appropriate button to rotate the template.

Each of the four numbers in the grid has a letter assigned to it. Write the letter and the number assigned to it for the third orientation below.
9. Move to page 2.1. Read pages 2.1 through 2.3.

Find at least one word that can be formed with these letters:

## $\begin{array}{lllll}\boldsymbol{A} & \boldsymbol{T} & \boldsymbol{M} & \boldsymbol{H}\end{array}$

Write your answer(s) below.

\section*{| 2.3 | 2.4 | 2.5 | P Cipher_Solvers $\nabla$ |
| :--- | :--- | :--- | :--- | <br> Do you have any idea what word <br> can be formed with these letters. <br> A $\quad$ T $\quad$ M $\quad \mathrm{H}$}

Find at least one word before proceeding.
10. Move to page 2.4 and read it.
a. Using the instructions on page 2.4, write the ordered pairs using the numbers from problem 6.
b. Using the instructions on page 2.4 , write the ordered pairs using the numbers from problem 7 .
c. Using the instructions on page 2.4, write the ordered pairs using the numbers from problem 8.
$\qquad$
$\qquad$
11. Move to page 2.5.

Grab and move the points so that each of the points listed in question 10 is plotted. Use the same color for each pair of points. Then, plot the points on the CipherSolver_Graph_Paper supplied by your teacher.

## 

Bobby plots the points on the map and says, 'It doesn't look like anything. '

Alison replies, 'Hey, wait... What if we connect the poinst from each set with a line e"

Create the equations of the three lines and write those equations on your paper.

Go back to page 2.5 and graph
those three equations, then proceed to 2.7
13. Write the three equations determined by the members of your group below.
$\qquad$
$\qquad$
$\qquad$
14. Go back to page 2.5 and graph these three equations (also graph on the graph paper). The equations will not display on the screen, but the graphs will display. Then move to page 2.7. What do these three lines determine?
$\qquad$
$\qquad$
15. Move to page 2.8
a. Determine the vertices of the triangle created by these lines.

Each person in the group will determine the ordered pair for just one vertex, but a different vertex. Show your work below.

The three lines determine a triangle.
On your paper, determine the vertices of the triangle created by these three lines.

Each person in the group will find the ordered pair for a different vertex.

Plot these points on page 2.5
b. Write the ordered pairs for the three vertices found by the members of your group below.
c. Plot these points on page 2.5 .
16. Move to page 3.1. Read it and discuss in your group how you might find a point that is equidistant from the three vertices of a triangle.
17. Read pages 3.2 and 3.3. Make notes as necessary.
a. Discuss in your groups how you know that line $k$ is the perpendicular bisector of segment AB. Write your answer below.
b. This diagram only shows that points C and E are equidistant
 from the segment's endpoints. Grab and move point $C$ along $\vec{k}$. Does it appear that $A C=B C$ no matter where $C$ is?
$\qquad$
$\qquad$

## IMPORTANT:

If your teacher has instructed you to finish solving this activity with only algebra (no geometry), then move to page 4.1 in the TI-Nspire documentand skip to number 21 (Algebra only solution) on the next page. If you are solving this with geometry and algebra, move to page 3.5 in the TI-Nspire document, then continue with number 18 below.

## (Continue here for the geometry and algebra solution)

18. Read pages 3.4 and 3.5 .

We will first geometrically construct the lines that are perpendicular bisectors of each side of the triangle. Go back to page 2.5 to do this.
19. On page 2.5, select menw, Geometry, Construction, Perpendicular Bisector.

- Select one vertex of the triangle.
- Then select a second vertex of the triangle.
- The line that is the perpendicular bisector of that side is shown.

Repeat for each of the other two sides.
(You may need to grab the "end" of one of the lines to extend it to the edge of the page.)
What do you notice about the three perpendicular bisectors?
20. Confirm your answer to number 19 using algebra.

Determine the equations of the perpendicular bisectors of each of the three sides of the triangle.
(Each person in the group should determine a different one of these). Show your work below.

## ***Continue to number 22 on the next page.

$\qquad$

## (Continue here for the algebra only solution)

21. Each person in the group will pick a different side of the triangle and will find the equation of the line that is perpendicular to that side and that passes through the midpoint of the side. You will need to decide which midpoint to use for each side of the triangle.
Midpoints: $(20,12)$
$(16,4)$
$(8,16)$

Show your work below.

## (All students continue with this question)

22. Write the three equations found by the members of your group below.

Eq. 1 $\qquad$ Eq. 2 $\qquad$ Eq. 3 $\qquad$
Graph these three lines on page 2.5 (and on the graph paper) to confirm that they are correct. Make any necessary corrections.
23. Determine the coordinates where each pair of lines intersects. Use algebra to do so and show your work below. Each person in the group will find the intersection point of two different lines.
24. Write the coordinates of the points of intersection found by the members of your group below. Express them in two ways: as an exact fraction and rounded to the nearest thousandth.

Eq 1 and Eq 2 $\qquad$
$\qquad$

Eq 2 and Eq 3 $\qquad$
$\qquad$

Eq 1 and Eq 3 $\qquad$
$\qquad$
$\qquad$
$\qquad$
25. Move to page 5.1. Follow the instructions and enter the coordinates of the intersection you determined in question Type the $x$-coordinate, then select tab. Type the $y$-coordinate.

Select enter.
Did you find the treasure?
If so, great!
If not, follow the directions on the screen.

26. Read pages 6.1 and 6.2. Then move to page 6.3.

27. Select $\boldsymbol{E}$ to Encrypt or select the Encrypt button.

Type an encryption key: any 4- to 12-digit number and select enter . Write it below.

Type your message using only letters and spaces.
When finished typing, select enter . Write the message below.

The encrypted message is displayed, along with the key.
Write it below (it will contain letters and spaces).

Select 'clear' twice, by selecting cttrl dwice. This will navigate back to the main menu.

Select $\square$ to decrypt. Follow the instructions on the screen.

Do another encrypted message, if you like. Share within your group.
