Introduction

In this Reference Guide you will find the following information:

- CATALOGUE, Strings, Hyperbolic Functions Includes instructions on browsing, using, entering strings, and other functions in the CATALOGUE.
- Commands and Functions Listing Includes an alphabetical listing of all CATALOGUE items, referencing:
 - Function or Instruction/Arguments
 - Results
 - Key or Keys/Menu or Screen/Item
- Arithmetic Operations, Test Relations and Symbols Items whose names are not alphabetic (such as +, !, and >).
- Error Messages Includes a listing of error types with possible causes and suggested remedies.

CATALOGUE, Strings, Hyperbolic Functions

What Is the CATALOGUE?

The CATALOGUE is an alphabetical list of all functions and instructions on the TI-84 Plus CE-T. You also can access each CATALOGUE item from a menu or the keyboard, except:

- The six string functions
- The six hyperbolic functions
- The solve(instruction without the equation solver editor
- The inferential stat functions without the inferential stat editors

Note: The only CATALOGUE programming commands you can execute from the home screen are GetCalc(, Get(, and Send(.

Browsing the TI-84 Plus CE-T Catalogue Help

Selecting an Item from the CATALOGUE

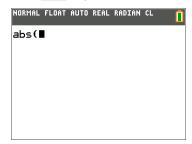

To browse and select a **CATALOGUE** item, follow these steps.

Press 2nd catalog to display the CATALOGUE.

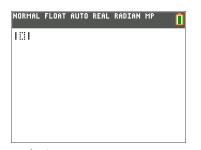

The b in the first column is the selection cursor.

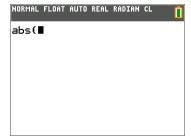

- 2. Press or for to scroll the **CATALOGUE** until the selection cursor points to the item vou want.
 - To jump to the first item beginning with a particular letter, press that letter; alpha-lock is on.
 - Items that begin with a number are in alphabetical order according to the first letter after the number. For example, 2-PropZTest(is among the items that begin with the letter P.
 - Functions that appear as symbols, such as +, $^{-1}$, <, and $\sqrt{}$ (, follow the last item that begins with **Z**. To jump to the first symbol, **!**, press $[\theta]$.
- 3. Press entrer to paste the item to the current screen.

Note:

- From the top of the CATALOGUE menu, press \(\bigs \) to move to the bottom. From the bottom, press **▼** to move to the top.
- When your TI-84 Plus CE-T is in MathPrint™ mode, many functions will paste the MathPrint™ template on the home screen. For example, abs(pastes the absolute value template on the home screen instead of abs(.

MathPrint™

Classic

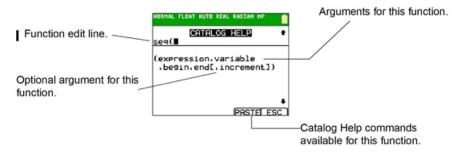

Using Catalogue Help

Displaying Catalogue Help

You can display Catalogue Help arguments for functions in two ways:

- Using an alpha/numeric function listing in the Catalogue (e.g, [2nd] [catalog]).
- Using the functions listed in certain menus (e.g, math).

Catalogue Help lists the valid arguments for the function under the edit line. Arguments in brackets are optional.

- Display the menu that contains the function. 1.
- 2. Use \bigcirc and/or \bigcirc to move the cursor to the function.
- Press + to display arguments for the function. The cursor is on the function edit line.

Note:

- The catalogue ([2nd] [catalog]) is displayed in alphabetical order. When you display the catalogue, the alpha-lock is turned on. Press the first letter of the function name to skip function names that come before it alphabetically. Use A and/or to move the cursor to the function.
- Not all catalogue functions have associated arguments. If the function does not require a argument. Catalogue Help displays the message "No grauments required for this item."

Catalogue Help Commands

Select **MORE** (if available) to display more arguments for the function.

Use shortcut menus alpha [f1] through [f4] through for argument values if available.

Enter your argument values on the function edit line, and then select **PASTE** to paste the function and the argument values you entered.

Note: You can paste to most cursor locations.

Select **ESC** to exit the Catalogue Help screen.

Entering and Using Strings

What Is a String?

A string is a sequence of characters that you enclose within quotation marks. On the TI-84 Plus EC-T, a string has two primary applications.

- It defines text to be displayed in a programme.
- It accepts input from the keyboard in a programme.

Characters are the units that you combine to form a string.

- Each number, letter, and space counts as one character.
- Each instruction or function name, such as sin(or cos(, counts as one character; the TI-84 Plus EC-T interprets each instruction or function name as one character.

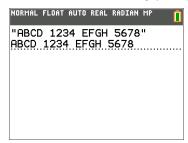

Entering a String

To enter a string on a blank line on the home screen or in a programme, follow these steps.

- 1. Press [alpha] ["] to indicate the beginning of the string.
- 2. Enter the characters that comprise the string.
 - Use any combination of numbers, letters, function names, or instruction names to create the string.
 - To enter a blank space, press alpha [].
 - To enter several alpha characters in a row, press alpha [A-lock] to activate alpha-lock.
- 3. Press [alpha] ["] to indicate the end of the string.

"string"

4. Press entrer. On the home screen, the string is displayed on the next line without quotations. An ellipsis (...) indicates that the string continues beyond the screen. To scroll to see the entire string, press \triangleright and \triangleleft .

Note: A string must be enclosed in quotation marks. The quotation marks do not count as string characters.

Storing Strings to String Variables

String Variables

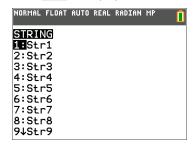

The TI-84 Plus EC-T, has 10 variables to which you can store strings. You can use string variables with string functions and instructions.

To display the **VARS STRING** menu, follow these steps.

1. Press vars to display the VARS menu. Move the cursor to 7:String.

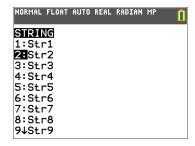

2. Press entrer to display the STRING secondary menu.

Storing a String to a String Variable

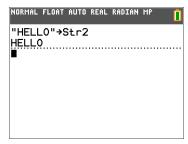

To store a string to a string variable, follow these steps.

- 1. Press [alpha] ["], enter the string, and press [alpha] ["].
- 2. Press sto→.
- Press vars 7 to display the VARS STRING menu.
- 4. Select the string variable (from Str1 to Str9, or Str0) to which you want to store the string.

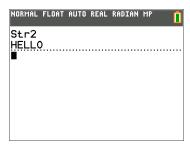

The string variable is pasted to the current cursor location, next to the store symbol (→).

5. Press entrer to store the string to the string variable. On the home screen, the stored string is displayed on the next line without quotation marks.

Displaying the Contents of a String Variable

To display the contents of a string variable on the home screen, select the string variable from the VARS STRING menu, and then press entrer. The string is displayed.

String Functions and Instructions in the CATALOGUE

Displaying String Functions and Instructions in the CATALOGUE

String functions and instructions are available only from the CATALOGUE. The table below lists the string functions and instructions in the order in which they appear among the other CATALOGUE menu items. The ellipses in the table indicate the presence of additional CATALOGUE items.

CATALOGUE	
 Equ▶String(Converts an equation to a string.
expr(Converts a string to an expression.
 inString(Returns a character's place number.
 length(Returns a string's character length.
 String▶Equ(Converts a string to an equation.

Returns a string subset as a string.

Concatenation

sub(

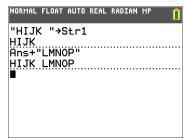

CATALOCUE

To concatenate two or more strings, follow these steps.

- 1. Enter *string1*, which can be a string or string name.
- 2. Press +.
- 3. Enter string2, which can be a string or string name. If necessary, press [+] and enter string3, and so on.

string1+string2+string3...

4. Press entrer to display the strings as a single string.

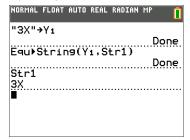

Selecting a String Function from the CATALOGUE

To select a string function or instruction and paste it to the current screen, follow the steps for selecting an item from the CATALOGUE.

Equ>String(

Equivariance Converts an equation to a string. The equation must be store in a VARS Y-VARS variable. **Y***n* contains the equation. **Str***n* (from **Str1** to **Str9**, or **Str0**) is the string variable to which you want the equation to be stored.

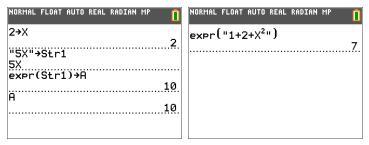

Equ▶String(Yn,Strn)

expr(

expr(converts the character string contained in *string* to an expression and executes it. *string* can be a string or a string variable.

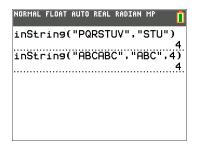

expr(string)

inString(

inString(returns the character position in *string* of the first character of *substring*. *string* can be a string or a string variable. *start* is an optional character position at which to start the search; the default is 1.

inString(string,substring[,start])

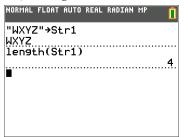

Note: If *string* does not contain *substring*, or *start* is greater than the length of *string*, **inString**(returns **0**.

length(

length(returns the number of characters in *string*. *string* can be a string or string variable.

Note: An instruction or function name, such as sin(or cos(, counts as one character.

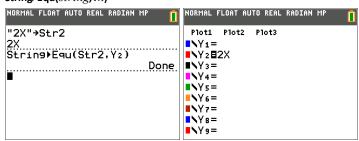

length(string)

String Equ(

String Equ(converts *string* into an equation and stores the equation to **Y***n*. *string* can be a string or string variable. **String Equ(** is the inverse of **Equ)String**(.

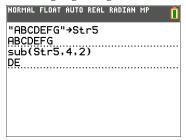

String Equ(string, Yn)

sub(

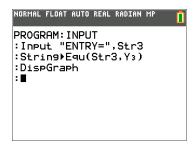

sub(returns a string that is a subset of an existing *string*. *string* can be a string or a string variable. *begin* is the position number of the first character of the subset. *length* is the number of characters in the subset.

sub(string,begin,length)

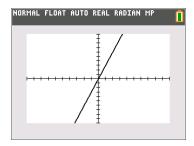

Entering a Function to Graph during Program Execution

In a program, you can enter a function to graph during program execution using these commands.

Note: When you execute this program, enter a function to store to Y3 at the ENTRY= prompt.

Hyperbolic Functions in the CATALOGUE

Hyperbolic Functions

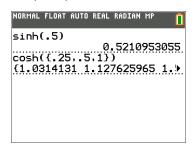

The hyperbolic functions are available only from the CATALOGUE. The table below lists the hyperbolic functions in the order in which they appear among the other **CATALOGUE** menu items. The ellipses in the table indicate the presence of additional CATALOGUE items.

CATALOGUE ... cosh(Hyperbolic cosine cosh-1(Hyperbolic arccosine ... sinh(Hyperbolic sine sinh-1(Hyperbolic arcsine ... tanh(Hyperbolic tangent tanh-1(Hyperbolic arctangent ...

sinh(, cosh(, tanh(

sinh(, cosh(, and tanh(are the hyperbolic functions. Each is valid for real numbers, expressions, and lists.

```
sinh(value)
cosh(value)
tanh(value)
```

sinh-1(, cosh-1(, tanh-1(

sinh-1(is the hyperbolic arcsine function. cosh-1(is the hyperbolic arccosine function. tanh-1(is the hyperbolic arctangent function. Each is valid for real numbers, expressions, and lists.

```
sinh-1(value)
cosh-1(value)
tanh-1(value)
```

---(0 0.881373587)
tanh<sup>4</sup>(-.5)
   -0.5493061443
```

Commands and Functions Listing

The purpose of this table of information is to provide a short description with syntax of command arguments as appropriate and menu locations for each command or function in the catalogue listing in the calculator.

This table is useful for executing commands when using the calculator or creating TI-Basic programs.

Items whose names are not alphabetic (such as +, !, and >) are listed in the Arithmetic Operations, Test Relations, and Symbols section. Unless otherwise specified, all examples in this section were performed in the default reset mode, and all variables are assumed to be the default value of 0.

From the catalogue you can paste any function or command to the home screen or to a command line in the program editor.

The same syntax information for function and command arguments below is available on the calculator and also in the TI Connect™ CE Program Editor.

- On the calculator, pressing [+] when a function or command is highlighted in the menu listing will display the catalogue Help syntax editor to assist your entries.
- Using TI Connect™ CE Program Editor, the catalogue listing also displays the syntax of the arguments for functions and commands.

Note that some functions and commands are only valid when executed in a TI-Basic program and not from the home screen.

The items in this table appear in the same order as they appear in the catalogue ([2nd] [catalogue].)

In the table below, the * symbol indicates either keystrokes or certain commands which are only available in the Program Editor mode on the calculator. Press prgm and select to **EDIT** an existing program or **NEW** to start a new programme to set the calculator in the Program Edit mode.

Some arguments are optional. Optional arguments will be indicated within [] in the syntax help given in the table below. [] are not symbols on the calculator and are not to be typed in. They are used here only to indicate an optional argument.

On the calculator, functions and commands paste as "tokens." This means they paste as one character and not as individual letters, symbols and spaces. Do not attempt to type in any function or command on the calculator. Just paste the token from menu locations. Watch the cursor jump over tokens as you edit to get a better understanding of tokens.

In TI Connect™ CE Program Editor, you can "feel" the same experience of pasting tokens when using the catalogue tree provided in that editor. You also can type in the functions and commands if you know the correct format and syntax. TI Connect™ CE "tokenises" the functions and commands when you send the programme to the calculator. However, you must type in the functions and commands in exactly the same way as the tokens. Note that some commands will have spaces as part of the token which you might not see. For example, Pause command as a token has a space at the

end. Once you send the programme to the calculator, you can run the programme and if there are any syntax errors, you can fix the issues on either the calculator or in TI Connect™ CE Program Editor.

CTL	I/O	COLOUR	EXEC
		Colour Numbers	Names

You can also choose a name in the vars menu (COLOUR sub-menu).

GraphColour(function#,colour#)

For example, GraphColour(2,4) or GraphColour(2,MAGENTA).

Alpha catalogue Listing

A

abs()

abs(value)

Returns the absolute value of a real number, expression, list, or matrix.

MATH NUM 1:abs(

abs()

abs(complex value)

Returns the magnitude of a complex number or list.

MATH CMPLX 5:abs(

2nd [TEST] LOGIC

1:and

and

valueA and valueB

Returns 1 (true) when both valueA and valueB are true. Otherwise, return is 0 (false).

valueA and valueB can be real numbers, expressions, or lists.

TI Connect™ programme Editor Tip:

Notice the token is "_and_" where "_" is a space.

angle()

angle(value)

Returns the polar angle of a complex number or list of complex numbers.

MATH CMPLX

4:angle(

ANOVA()

ANOVA(list1,list2[,list3,...,list20])

TESTS

Performs a one-way analysis of variance for comparing the means of two to 20 populations.

H:ANOVA(

2nd [ANS]

Ans

Ans

Returns the last answer.

Archive

Archive variables

2nd MEM 5:Archive

Moves the specified variable from RAM to the user data archive memory.

augment()

augment(matrixA , matrixB)

[2nd] [MATRIX] MATH 7:augment(

Returns a matrix, which is matrixB appended to matrixA as new columns.

augment()

augment(listA, listB)

[2nd] [LIST] **OPS**

Returns a list, which is listB concatenated to the end of listA.

9:augment(

fMax(

fMax(expression,variable,lower,upper[,tolerance])

MATH MATH

Returns the value of *variable* where the local maximum of *expression* occurs, between *lower* and *upper*,with specified *tolerance*.

7:fMax(

fMin(

fMin(expression,variable,lower,upper[,tolerance])

MATH MATH 6:fMin(

Returns the value of *variable* where the local minimum of *expression* occurs, between *lower* and *upper*, with specified *tolerance*.

fnInt(

fnInt(expression,variable,lower,upper[,tolerance])

Returns the function integral of *expression* with respect to *variable*, between *lower* and *upper*, with specified *tolerance*.

MATH MATHS 9:fnInt(

FnOff

FnOff [function#,function#,...,function n]

Deselects all Y= functions or specified Y= functions.

VARS Y-VARS 4:On/Off 2:FnOff

FnOn

FnOn [function#,function#,...,function n]

Selects all Y= functions or specified Y= functions.

VARS Y-VARS 4:On/Off 1:FnOn

For(

:For(variable,begin,end

[,increment]):commands:End:commands

Executes *commands* through **End**, incrementing *variable* from *begin* by *increment* until *variable>end*.

+ PRGM CTL

4:For(

fPart(

fPart(value)

Returns the fractional part or parts of a real or complex number, expression, list, or matrix.

MATH NUM 4:fPart(

Fpdf(

Fpdf(x,numerator df,denominator df)

2nd [DISTR] DISTR 9: **F** pdf(

Computes the F distribution probability between lowerbound and upperbound for the specified $numerator\ df$ (degrees of freedom) and $denominator\ df$.

▶Frac

value Frac

Displays a real or complex number, expression, list, or matrix as a fraction

MATH MATH

GarbageCollect

2nd [CATALOG] GarbageCollect

Displays the garbage collection menu to allow cleanup of unused archive memory.

gcd(

gcd(valueA, valueB)

MATH NUM

Returns the greatest common divisor of valueA and valueB, which can be real numbers or lists.

9:gcd(

geometcdf(

geometcdf(p,x)

2nd [DISTR]

Computes a cumulative probability at x, the number of the trial on which the first success occurs, for the discrete geometric distribution with the specified probability of success p.

DISTR F:geometcdf(

geometpdf(

geometpdf(p,x)

2nd [DISTR] DISTR E:geometpdf(

Computes a probability at x, the number of the trial on which the first success occurs, for the discrete geometric distribution with the specified probability of success p.

Get(

Get(variable)

+ PRGM

Retrieves a value from a connected TI-Innovator™ Hub and stores the data to a variable on the receiving CE calculator.

1/0

Note: See also Send(and eval(

A:Get

Ti-Innovator™ Get(Hub

Get(variable)

Retrieves a value from a connected TI-Innovator $^{\rm TM}$ Hub and stores the data to a variable on the receiving CE calculator.

HUB

+ PRGM

Note: See also Send(and eval(5:Get

GetCalc(

GetCalc(variable[,portflag])

† PRGM

0:GetCalc(

Gets contents of variable on another TI-84 Plus CE and stores it to variable on the receiving TI-84 Plus CE. By default, the TI-84 Plus CE uses the USB port if it is connected. If the USB cable is not connected, it uses the I/O port.

portflag=0 use USB port if connected;

portflag=1 use USB port;

portflag=2 use I/O port.(Ignored when programme runs on the TI-84 Plus CE.)

getDate

getDate

2nd [CATALOG]

getDate

Returns a list giving the date according to the current value of the clock. The list is in $\{year, month, day\}$ format.

getDtFmt

getDtFmt

2nd

Returns an integer representing the date format that is currently set on the device.

[CATALOG] getDtFmt

- 1 = M/D/Y
- 2 = D/M/Y
- 3 = Y/M/D

getDtStr(

getDtStr(integer)

Returns a string of the current date in the format specified by *integer*, where:

[CATALOG] getDtStr(

- 1 = M/D/Y
- 2 = D/M/Y
- 3 = Y/M/D

getTime

getTime

Returns a list giving the time according to the current value of the clock. The list is in $\{hour, minute, second\}$ format. The time is returned in the 24 hour format.

2nd [CATALOG] getTime

getTmFmt

getTmFmt

Returns an integer representing the clock time format that is currently set on the device.

2nd [CATALOG] getTmFmt

12 = 12 hour format

24 = 24 hour format

getTmStr(

getTmStr(integer)

Returns a string of the current clock time in the format specified by *integer*, where:

[CATALOG] getTmStr(

12 = 12 hour format

24 = 24 hour format

getKey

getKey

+ PRGM

Returns the key code for the current keystroke, or **0**, if no key is pressed.

7:getKey

Goto

Goto*label*

† [PRGM]

Transfers control to label.

0:Goto

GraphColour(

GraphColour(function#,colour#)

† PRGM

Sets the colour for function#.

H:GraphColour(

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

GraphStyle(

GraphStyle(function#,graphstyle#)

† PRGM

Sets a graphstyle for function#.

H:GraphStyle(

GridDot

GridDot [colour#]

+ (2nd)

Turns on grid dots in the graph area in the specified colour.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

GridDot

GridLine

GridLine [colour#]

† 2nd [FORMAT] GridLine

Turns on grid lines in the graph area in the specified colour.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

inString(

inString(string,substring[,start])

Returns the character position in *string* of the first character of *substring* beginning at *start*.

[CATALOG] inString(

int(

int(value)

Returns the largest integer a real or complex number, expression, list, or matrix.

NUM 5:int(

Σ Int(

$\Sigma Int(pmt1,pmt2[,roundvalue])$

Computes the sum, rounded to roundvalue, of the interest amount between pmt1 and pmt2 for an amortisation schedule.

APPS
1:Finance
CALC
A: Σ Int(

invBinom(

invBinom(area,trial,p)

The inverse binomial cumulative distribution function results in the minimum number of successes, such that the cumulative probability for that minimum number of successes > the given cumulative probability (area). If more information is needed, also find the binomcdf for the result from invBinom(as shown below for a full analysis.

2nd [DISTR]

DISTR

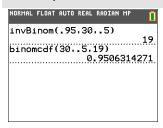

C:invBinom(

Details:

Assume the toss of a fair coin 30 times. What is the minimum number of heads you must observe such that the cumulative probability for that number of observed heads is at least 0.95?

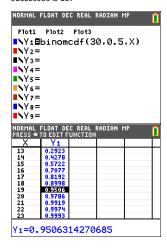

The results on the screen first show that the minimum number of successes to obtain at least the given cumulative probability of 0.95 is 19. Next, the cumulative probability for up to 19 is computed using binomcdf(and is approximately 0.9506314271 which meets the criteria of 0.9506314271>0.95

invBinom(

Alternate Method:

Set Y1=binomcdf(30.0.5.X) and use the table of values (starting at 0 and increment by 1) to find when the cumulative probability is at or just above the given cumulative probability. This gives you a view of all values to make decisions. For this example, search in the table to find the cumulative probability just larger than 0.95. Again, the number of successes is 19.

invNorm(

invNorm(area[,μ,σ,tail])

2nd DISTR

tail [catalogue]: LEFT, CENTRE, RIGHT

DISTR

Computes the inverse cumulative normal distribution function for a given area under the normal distribution curve specified by μ and σ -. The optional argument tail can be LEFT (-∞,-a), CENTRE [-a,a] or RIGHT (a, ∞) for Real a.

3:invNorm(

The tokens LEFT, CENTRE and RIGHT can be found in [catalogue].

LEFT

LFFT

LEFT is a tail argument for the invNorm(command where the optional

2nd [CATALOG]

argument tail can be LEFT (-∞,-a), CENTRE [-a,a] or RIGHT (a, ∞) for Real a.

See also invNorm(.

RIGHT

RIGHT

[2nd] [CATALOG] RIGHT

RIGHT is a tail argument for the invNorm(command where the optional argument tail can be LEFT (-∞,-a), CENTRE [-a,a] or RIGHT (a, ∞) for Real a.

See also invNorm(.

CENTRE

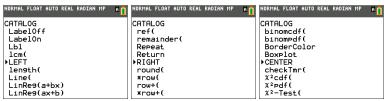

CENTRE

CENTRE is a tail argument for the invNorm(command where the optional argument tail can be LEFT (-∞,-a), CENTRE [-a,a] or RIGHT (a, ∞) for Real a.

See also invNorm(.

LEFT RIGHT CENTRE

invT(

invT(area,df)

Computes the inverse cumulative student-t probability function specified by degree of freedom, df for a given area under the curve.

DISTR 4:invT(

iPart(

iPart(value)

MATH NUM

Returns the integer part of a real or complex number, expression, list, or matrix.

3:iPart(

irr(

irr(CF0,CFList[,CFFreq])

Returns the interest rate at which the net present value of the cash flow is equal to zero.

APPS 1:Finance CALC 8:irr(

isClockOn

isClockOn

Identifies if clock is ON or OFF. Returns 1 if the clock is ON. Returns 0 if the clock is OFF.

Creates a *label* of one or two characters.

CTL 9:Lbl

lcm(

Icm(valueA, valueB)

Returns the least common multiple of valueA and valueB, which can be real numbers or lists.

MATH NUM 8:lcm(

length(

length(string)

Returns the number of characters in string.

[CATALOG] length(

Line(

Line(X1,Y1,X2,Y2[,erase#,colour#,linestyle#])

Draws a line from (XI,YI) to (X2,Y2) with the following options: erase #: 1,0, colour #: 10-24, and line style #: 1-4.

2nd [DRAW] DRAW 2:Line(

Line(

Line(X1,Y1,X2,Y2,0[,line#])

Erases a line (erase #: 1,0) from (XI,YI) to (X2,Y2).

2nd [DRAW] DRAW 2:Line(

LinReg(a+bx)

LinReg(a+bx) [Xlistname, Ylistname, freqlist, regequ]

Fits a linear regression model to $\it Xlistname$ and $\it Ylistname$ with frequency $\it freqlist$, and stores the regression equation to $\it regequ$.

CALC 8:LinReg (a+bx)

LinReg(ax+b)

LinReg(ax+b) [Xlistname, Ylistname, freqlist, regequ]

Fits a linear regression model to Xlistname and Ylistname with frequency freqlist, and stores the regression equation to regequ.

CALC 4:LinReg (ax+b)

LinRegTInt

LinRegTInt [Xlistname, Ylistname, freqlist, confidence level, regequ]

•

Performs a linear regression and computes the t confidence interval for the slope coefficient b.

TESTS G:LinRegTInt

+ ISTAT

LinRegTTest

LinRegTTest

[Xlistname,Ylistname,freqlist,alternative,regequ]

TESTS F:LinRegTTest

Performs a linear regression and a *t*-test. *alternative=***-1** is <; *alternative=***0** is ; *alternative=***1** is >.

∆List(

 Δ List(list)

Returns a list containing the differences between consecutive elements in *list*.

2nd [LIST]

OPS 7: ∆ List(

List≯matr(

List matr(listname1,...,listname n,matrixname)

2nd [LIST]

Fills *matrixname* column by column with the elements from each specified *listname*.

0:List ▶ matr

In(

In(value)

[LN]

Returns the natural logarithm of a real or complex number, expression, or list.

LnReg

LnReg [Xlistname, Ylistname, freqlist, regequ]

STAT

Fits a logarithmic regression model to Xlistname and Ylistname with frequency freqlist, and stores the regression equation to regequ.

CALC 9:LnReg

log(

log(value)

LOG

Returns logarithm of a real or complex number, expression, or list.

logBASE(

logBASE(value, base)

MATH

Returns the logarithm of a specified value determined from a specified base: logBASE(value, base).

A: logBASE

Logistic

Logistic [Xlistname, Ylistname, freqlist, regequ]

Fits a logistic regression model to Xlistname and Ylistname with frequency $\mathit{freqlist}$, and stores the regression equation to regequ .

CALC **B:Logistic**

Manual-Fit

Manual-Fit[equname,colour#,line style#]

ISTAT CALC

Fits a linear equation to a scatter plot with specified colour and line style.

TESTS B:2-PropZInt(

1-PropZTest(

1-PropZTest(*p0,x,n*[,*alternative*,*drawflag*, *colour*#])

+ STAT **TESTS**

5:1-PropZTest

Computes a one-proportion z test. alternative = -1 is <; alternative = 0 is ; alternative=1 is >. drawflag=1 draws results; drawflag=0 calculates results.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

2-PropZTest(

2-PropZTest(x1,n1,x2,n2[, alternative, drawflag, colour#])

Computes a two-proportion z test. alternative=-1 is <; alternative=0 is ; alternative=1 is >. drawflag=1 draws results; drawflag=0calculates results.

+ STAT TESTS 6:2-PropZTest

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

Pt-Change(

Pt-Change(x,y[,colour#])

[2nd] [DRAW] **POINTS** 3:Pt-Change(

Toggles a point on or off at (x,y) on the graph area. Off will be in the Background colour and On will be the specified

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

Pt-Off(

Pt-Off(x,y[,mark])

[2nd] [DRAW] **POINTS** 2:Pt-Off(

Erases a point at (x,y) on the graph area using mark. The Off state may be the background colour determined by the ImageVar or coloursetting.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

Pt-On(

Pt-On(x,y[,mark,colour#])

2nd DRAW **POINTS** 1:Pt-On(

Draws a point at (x,y) on the graph area using mark and the specified colour#.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

PwrReg

PwrReg [Xlistname, Ylistname, freqlist, regequ]

STAT CALC A:PwrReg

Fits a power regression model to Xlistname and Ylistname with frequency freglist, and stores the regression equation to regegu.

Pxl-Change(

PxI-Change(row,column[,colour#])

2nd [DRAW] POINTS

Toggles Off to On in the graph area: with specified colour# Toggles On to Off in the graph area: Off will display the set Background Image Var or colour.

6:Pxl-Change

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

PxI-Off(

PxI-Off(row,column)

2nd [DRAW]

The Off state will display the set Background Image Var or COLOUR. $\label{eq:colored}$

POINTS 5:Pxl-Off(

Pxl-On(

PxI-On(row,column[,colour#])

2nd [DRAW] POINTS

Draws pixel on the graph area at (row,column) in the specified colour.

POINTS 4:Pxl-On(

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

pxl-Test(

pxl-Test(row,column)

2nd [DRAW]

Returns 1 if pixel (row, column) is on, 0 if it is off;

POINTS 7:pxl-Test(

P▶Rx(

 $P \triangleright Rx(r,\theta)$

2nd [ANGLE]

Returns ${\bf X}$, given polar coordinates r and ${\bf \theta}$ or a list of polar coordinates.

ANGLE 7:P ▶ Rx(

P≯Ry(

 $P \triangleright Rv(r,\theta)$

2nd [ANGLE]

Returns **Y**, given polar coordinates r and θ or a list of polar coordinates.

ANGLE 8:P ▶ Ry(

QuadReg

QuadReg [Xlistname, Ylistname, freqlist, regequ]

CALC Fits a quadratic regression model to Xlistname and Ylistname with 5:QuadReg frequency *freqlist*, and stores the regression equation to *regequ*.

QuartReg

QuartReg [Xlistname, Ylistname, freqlist, regequ]

Fits a quartic regression model to Xlistname and Ylistname with frequency *freqlist*, and stores the regression equation to *regequ*.

STAT CALC 7:QuartReg

STAT

R

Radian

+ MODE Radian Radian Sets radian angle mode.

rand

rand[(numtrials)]

MATH PRB Returns a random number between 0 and 1 for a specified number of 1:rand trials numtrials.

randBin(

randBin(numtrials,prob[,numsimulations])

MATH PRB Generates and displays a random real number from a specified Binomial 7:randBin(distribution.

randInt(

randInt(lower,upper [,numtrials])

Generates and displays a random integer within a range specified by lower and upper integer bounds for a specified number of trials numtrials.

MATH PRR 5:randInt(

randIntNoRep(

randIntNoRep(lowerint,upperint [,numelements])

MATH PRR

Returns a randomly ordered list of integers from a lower integer to an upper integer which may include the lower integer and upper integer. If the optional argument numelements is specified, the first numelements are listed. The first numelements term in the list of random integers are displayed.

8:randIntNoRep(

randM(

randM(rows,columns)

[MATRIX]

Returns a random matrix of rows × columns.

MATH

Max rows x columns = 400 matrix elements.

6:randM(

randNorm(

$randNorm(\mu,\sigma[,numtrials])$

MATH

Generates and displays a random real number from a specified Normal distribution specified by μ and σ for a specified number of trials numtrials.

PRB 6:randNorm(

re^Ai

re^θi

+ MODE

Sets the mode to polar complex number mode ($\mathbf{r}e^{\mathbf{A}\theta}i$).

re A Ai

Real

Real

+ MODE

Sets mode to display complex results only when you enter complex numbers.

Real

real(

real(value)

Returns the real part of a complex number or list of complex numbers.

MATH CPLX

2:real(

RecallGDB

RecallGDB n

2nd [DRAW]

Restores all settings stored in the graph database variable ${\bf GDB}n$.

4:RecallGDB

RecallPic

RecallPic n

[2nd] [DRAW]

Displays the graph and adds the picture stored in **Pic***n*.

2:RecallPic

▶Rect

complex value ▶Rect

MATH

Displays complex value or list in rectangular format.

CMPLX 6: ▶ Rect

RectGC

RectGC

+ 2nd Format

Sets rectangular graphing coordinates format.

RectGC

ref(

ref(matrix)

(2nd) [Matrix]

Returns the row-echelon form of a *matrix*.

MATHS A:ref(

remainder(

remainder(dividend, divisor)

MATH

Reports the remainder as a whole number from a division of two whole numbers where the divisor is not zero.

0:remainder(

remainder(

remainder(list, divisor)

Reports the remainder as a whole number from a division of two lists where the divisor is not zero.

MATH NUM 0:remainder(

remainder(

remainder(dividend, list)

Reports the remainder as a whole number from a division of two whole numbers where the divisor is a list.

MATH NUM 0:remainder(

remainder(

remainder(list, list)

Reports the remainder as a whole number from a division of two lists.

MATH NUM 0:remainder

Repeat

Repeatcondition:commands:End:commands

† PRGM

Executes commands until condition is true.

6:Repeat

Return

Return

+ PRGM

Returns to the calling programme.

CTL E:Return

round(

round(value[,#decimals])

MATH

Returns a number, expression, list, or matrix rounded to #decimals (9).

NUM 2:round(

*row(

*row(value,matrix,row)

Returns a matrix with row of matrix multiplied by value and stored in row.

2nd [MATRIX] MATHS E: * row(

row+(

row+(matrix,rowA,rowB)

Returns a matrix with rowA of matrix added to rowB and stored in rowB.

2nd [MATRIX] MATHS D:row+(

*row+(

*row+(value,matrix,rowA,rowB)

Returns a matrix with rowA of matrix multiplied by value, added to rowB, and stored in rowB.

2nd [MATRIX] MATHS F: * row+(

rowSwap(

rowSwap(matrix,rowA,rowB)

Returns a matrix with rowA of matrix swapped with rowB.

2nd [MATRIX] MATH C:rowSwap(

rref(

rref(matrix)

Returns the reduced row-echelon form of a matrix.

2nd [Matrix]

MATHS B:rref(

R≯Pr(

 $R \triangleright Pr(x, y)$

Returns ${\bf R}$, given rectangular coordinates x and y or a list of rectangular coordinates.

2nd [ANGLE] ANGLE 5:R ▶ Pr(

R▶Pθ(

 $\mathbf{R} \triangleright \mathbf{P} \theta(x, y)$

Returns θ , given rectangular coordinates x and y or a list of rectangular coordinates.

2nd [ANGLE] ANGLE 6:R ▶ P θ (

2-Samp Test

2-Samp Test

l listname l + STAT TESTS E:2-Samp F Test

listname2

freqlist1,freqlist2,alternative,drawflag,colour#]

Performs a two-sample F test. alternative=**1** is <; alternative=**0** is ; alternative=**1** is >. drawflag=**1** draws results; drawflag=**0** calculates results.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

Innovator Hub sensors

seq(

seq(expression,variable,begin,end[,increment])

2nd [LIST]

Returns list created by evaluating expression with regard to variable, from begin to end by increment.

OPS 5:seq(

SEQ(n)

+ MODE Seq(n)

In sequence mode, SEQ(n) sets the sequence editor type to enter sequence functions, u, v or w, as a function of the independent variable n. Can also be set from the Y= editor in **SEQ mode**.

SEQ(n)

SEQ(n+1)

Seq(n+1)+ MODE

In sequence mode, SEQ(n+1) sets the sequence editor type to enter sequence functions, u, v or w, as a function of the independent variable n+1. Can also be set from the Y= editor in **SEQ mode**.

SEQ(n+1)

SEQ(n+2)

Seq(n+2)

In sequence mode, SEQ(n+2) sets the sequence editor type to enter sequence functions, u, v or w, as a function of the independent variable n+2. Can also be set from the Y= editor in SEQ mode.

SEQ(n+2)

+ MODE

Note: "Type" will NOT be included in the TIC CE PE syntax On the device, "Type" does not paste and is similar to how the device displays, for example, DEC Answers where Answers appears in [catalogue] but does not paste.

Seq

Seq

† MODE

Sets sequence graphing mode.

Seq

Sequential

Sequential

† MODE

Sets mode to graph functions sequentially.

Sequential

setDate(

setDate(year, month, day)

2nd [CATALOG]

setDate(

Sets the date using a year, month, day format. The year must be 4 digits; month and day can be 1 or 2 digit.

setDtFmt(

setDtFmt(integer)

2nd [Catalog]

Sets the date format.

1 = M/D/Y

2 = D/M/Y3 = Y/M/D setDtFmt(

setTime(

setTime(hour, minute, second)

[2nd] [CATALOG]

setTime(

Sets the time using an hour, minute, second format. The hour must be in 24 hour format, in which 13 = 1 p.m.

setTime(

setTmFmt(

setTmFmt(integer)

Sets the time format.

12 = 12 hour format 24 = 24 hour format

2nd [CATALOG] setTmFmt(

SetUpEditor

SetUpEditor

Removes all list names from the stat list editor, and then restores list names L1 through L6 to columns 1 through 6.

STAT 5:SetUpEditor

SetUpEditor

SetUpEditor *listname1*[,*listname2*,...,*listname20*]

Removes all list names from the stat list editor, then sets it up to display one or more *listnames* in the specified order, starting with column 1.

STAT **EDIT** 5:SetUpEditor

Shade(

Shade(lowerfunc,upperfunc [Xleft,Xright,pattern,patres,colour#]) [2nd] [DRAW] DRAW 7:Shade(

Draws lowerfunc and upperfunc in terms of X on the current graph and uses pattern and patres to shade and colour the area bounded by lowerfunc, upperfunc, Xleft, and Xright. lowerfunc and upperfunc are shaded in the same specified colour.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

$\text{Shade} \chi^{2} \text{(}$

$Shade\chi^2(lowerbound, upperbound, df[, colour#])$

2nd [DISTR] DRAW 3:Shade χ ² (

Draws the density function for the χ^2 distribution specified by degrees of freedom df, and shades and colours the area between lowerbound and upperbound.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

Shade (

Shade

 $\label{lowerbound} \mbox{(lowerbound,numerator df, denominator df, colour \#])}$

2nd [DISTR] DRAW 4:Shade **F** (

Draws the density function for the ${\bf F}$ distribution specified by $numerator\ df$ and $denominator\ df$ and shades and colours the area between lowerbound and upperbound.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

ShadeNorm(

ShadeNorm(lowerbound,upperbound[, μ , σ ,colour#])

2nd [DISTR] DRAW 1:ShadeNorm(

Draws the normal density function specified by μ and σ and shades and colours the area between lower bound and upper bound .

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

Shade t(

Shade_t(lowerbound,upperbound,df[,colour#])

2nd [DISTR] DRAW 2:Shade t(

Draws the density function for the Student-t distribution specified by degrees of freedom df, and shades or colours the area between *lowerbound* and *upperbound*.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

Simul

Simul

+ MODE Simul

Sets mode to graph functions simultaneously.

sin(

sin(value)

SIN

Returns the sine of a real number, expression, or list.

sin⁻¹(

sin⁻¹(value)

2nd SIN-1

Returns the arcsine of a real number, expression, or list.

sinh(

sinh(value)

2nd [CATALOG] sinh(

Returns the hyperbolic sine of a real number, expression, or list.

sinh⁻¹ (

sinh⁻¹ (value)

[2nd] [CATALOG] sinh = 1 (

Returns the hyperbolic arcsine of a real number, expression, or list.

SinReg

SinReg

[iterations,Xlistname,Ylistname,period,regequ]

STAT CALC C:SinReg

Attempts iterations times to fit a sinusoidal regression model to Xlistname and Ylistname using a period guess, and stores the regression equation to regequ.

solve(

solve(expression,variable,guess,{lower,upper})

Solves *expression* for *variable*, given an initial *guess* and *lower* and *upper* bounds within which the solution is sought.

† MATH MATHS 0:solve(

SortA(

SortA(listname)

Sorts elements of *listname* in ascending order.

2nd [LIST] OPS 1:SortA(

SortA(

SortA(*keylistname*, *dependlist1* [, *dependlist2*,..., *dependlist n*])

Sorts elements of keylistname in ascending order, then sorts each dependlist as a dependent list.

2nd [LIST] OPS 1:SortA(

SortD(

SortD(listname)

Sorts elements of *listname* in descending order.

2nd [LIST] OPS 2:SortD(

SortD(

SortD(*keylistname*, *dependlist1*[, *dependlist2*,..., *dependlist n*])

Sorts elements of keylistname in descending order, then sorts each dependlist as a dependent list.

2nd [LIST] OPS

2:SortD(

startTmr

startTmr

Starts the clock timer. Store or note the displayed value, and use it as the argument for **checkTmr()** to check elapsed time.

2nd [CATALOG] startTmr

STATWIZARD OFF

STATWIZARD OFF

Disables wizard syntax help for statistical commands, distributions, and seq(.

[2nd] [CATALOG] **STATWIZARD** OFF

STATWIZARD ON

STATWIZARD ON

Enables wizard syntax help for statistical commands, distributions, and seq(.

[2nd] [CATALOG] **STATWIZARD**

stdDev(

stdDev(list[,freqlist])

Returns the standard deviation of the elements in list with frequency freglist.

[2nd] [LIST] **MATHS** 7:stdDev(

ON(

Stop

Stop

Ends programme execution; returns to home screen.

+ [PRGM]

F:Stop

Store →

Store: value → variable

ST0**▶**

Stores value in variable.

StoreGDB

StoreGDB n

2nd [DRAW] STO

Stores current graph in database GDBn.

3:StoreGDB

StorePic

StorePic n

Stores current picture in picture **Pic***n*.

2nd [DRAW]

310

1:StorePic

String Equ(

String Equ(string, Y= var)

† PRGM

Converts string into an equation and stores it in Y= var.

F:String Equ(

string can be a string or string variable.

String Equ(is the inverse of Equ String(.

sub(

sub(string,begin,length)

2nd [CATALOG]

sub(

Returns a string that is a subset of another string, from begin to length.

sum(

sum(list[,start,end])

[2nd] [LIST]

Returns the sum of elements of *list* from *start* to *end*.

MATH 5:sum(

summation Σ (

 $\Sigma(expression[,start,end])$

MATH

Classic command as shown.

NUM

In MathPrint^m the summation entry template displays and returns the sum of elements of *list* from *start* to *end*, where *start* <= *end*.

0: summation Σ (

T

tan(

tan(value)

TAN

Returns the tangent of a real number, expression, or list.

tan⁻¹(

tan⁻¹(value)

2nd [TAN-1]

Returns the arctangent of a real number, expression, or list.

Tangent(

Tangent(expression, value[, colour#, linestyle#])

2nd [DRAW] DRAW 5:Tangent(

Draws a line tangent to expression at ${\bf X}=value$ with specified colour #: 10-24 and line style linestyle #: 1-2.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

tanh(

tanh(value)

Returns hyperbolic tangent of a real number, expression, or list.

[2nd] [CATALOG] tanh(

tanh⁻¹(

tanh⁻¹(value)

Returns the hyperbolic arctangent of a real number, expression, or list.

2nd [CATALOG] tanh⁻¹(

tcdf(

tcdf(lowerbound,upperbound,df)

Computes the Student-*t* distribution probability between *lowerbound* and *upperbound* for the specified degrees of freedom *df*.

2nd [DISTR] DISTR 6:tcdf(

Text(

Text(row,column,text1,text2,...,text n)

Writes *text* on graph beginning at pixel (*row,column*), where 0 *row* 164 and 0 *column* 264.

2nd [DRAW] DRAW 0:Text(

Full mode, row must be <=148; column must be 256

Horiz mode, row must be row<=66 and column must be <=256

G-T mode, row must be row <=126; column must be 176

TextColour(

TextColour([colour#]

+ 2nd DRAW

TextColour(

Set text colour prior to using the Text (command.

DRAW A:TextColour(

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

Then

Then

See If:Then

Thick

Thick
Resets all Y=editor line-style settings to Thick.

+ MODE Thick

Thin

Thin

Resets all Y=editor line-style settings to Thin.

+ MODE Thin

Time

Time

Sets sequence graphs to plot with respect to time.

+ 2nd Format

Time

timeCnv(

timeCnv(seconds)

2nd [CATALOG]

timeCnv

Converts seconds to units of time that can be more easily understood for evaluation. The list is in $\{days, hours, minutes, seconds\}$ format.

Tinterval

Tinterval [listname, freqlist, confidence level]

(Data list input)

† STAT TESTS

Computes a t confidence interval.

8:TInterval

toString(

toString((value[,format])

+ PRGM

toString(

Converts value to a string where *value* can be real, complex, an evaluated expression, list or matrix. String *value* displays in classic *format* (0) following the mode setting AUTO/DEC or in decimal *format* (1).

I/O E:toString(

TInterval

Tinterval \bar{X} , Sx, n[, $confidence\ level$] (Summary stats input)

† STAT TESTS

Computes a t confidence interval.

8:Tinterval

tpdf(

tpdf(x,df)

2nd [DISTR]

Computes the probability density function (pdf) for the Student-t distribution at a specified x value with specified degrees of freedom df.

DISTR 5:tpdf(

Trace

Trace

TRACE

Displays the graph and enters TRACE mode.

T-Test

T-Test $\mu\theta$

[,listname,freqlist,alternative,drawflag,colour#]) (Data list input) † STAT

2:T-Test

Performs a t test with frequency $freqlist.alternative=^-\mathbf{1}$ is <; $alternative=\mathbf{0}$ is $; alternative=\mathbf{1}$ is >. $drawflag=\mathbf{1}$ draws results; $drawflag=\mathbf{0}$ calculates results.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

T-Test

T-Test $\mu \partial_{x} \bar{x}_{x} Sx_{x}, n[$, alternative, drawflag, colour#])

† STAT TESTS

Performs a t test with frequency $freqlist. alternative=^1$ is <; alternative=0 is ; alternative=1 is >. drawflag=1 draws results; drawflag=0 calculates results.

2:T-Test

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

tvm FV

$tvm_FV[(N,I\%,PV,PMT,P/Y,C/Y)]$

Computes the future value.

1:Finance CALC 6:tvm_FV

tvm I%

tvm I%[(N,PV,PMT,FV,P/Y,C/Y)]

Computes the annual interest rate.

APPS
1:Finance
CALC
3:tvm_
I%

tvm_N

 $tvm_N[(I\%,PV,PMT,FV,P/Y,C/Y)]$

Computes the number of payment periods.

APPS 1:Finance CALC 5:tvm_ N

tvm_Pmt

 $tvm_Pmt[(N,I%,PV,FV,P/Y,C/Y)]$

Computes the amount of each payment.

1:Finance CALC 2:tvm_ Pmt

tvm PV

tvm PV[(N,I%,PMT,FV,P/Y,C/Y)]

Computes the present value.

1:Finance CALC 4:tvm_PV

U

UnArchive

UnArchive variable

2nd [MEM] 6:UnArchive

Moves the specified variables from the user data archive memory to RAM.

To archive variables, use Archive.

Un/d

Un/d

Displays results as a mixed number, if applicable.

MATH NUM C: Un/d

or

MATH FRAC 2:Un/d

uvAxes

uvAxes

Sets sequence graphs to plot $\mathbf{u}(n)$ on the x-axis and $\mathbf{v}(n)$ on the y-axis.

+ 2nd [FORMAT]

uv

uwAxes

uwAxes

Sets sequence graphs to plot $\mathbf{u}(n)$ on the x-axis and $\mathbf{w}(n)$ on the y-axis.

+ 2nd [FORMAT]

1-VarStats

1-VarStats [Xlistname, freqlist]

STAT CALC

1:1-Var Stats

Performs one-variable analysis on the data in Xlistname with frequency freqlist.

2-VarStats

2-VarStats [Xlistname, Ylistname, freqlist]

STAT

Performs two-variable analysis on the data in Xlistname and Ylistname with frequency freqlist.

CALC 2:2-Var Stats

variance(

variance(list[,freqlist])

[2nd] [LIST]

Returns the variance of the elements in *list* with frequency *freqlist*.

seconds.

WebSets sequence graphs to trace as webs.

+ 2nd [FORMAT]

Web

:While

:Whilecondition:commands

+ PRGM

:End:command

CTL 5:While

Executes commands while condition is true.

xor

valueA xor valueB

Returns 1 if only valueA or valueB = 0. valueA and valueB can be real numbers, expressions, or lists.

2nd [TEST] LOGIC 3:xor

xyLine

xyLine Plot#(*type*,*Xlist*,[,*freqlist*,*colour*#])

Used as the "type" argument in the command

Where # gives Plot1, Plot2 or Plot3.

† [2nd] [stat plot] TYPE

Ζ

ZBox

ZBox

Displays a graph, lets you draw a box that defines a new viewing window, and updates the window.

† ZOOM ZOOM 1:ZBox

ZDecimal

ZDecimal

Adjusts the viewing window so that **TraceStep=0.1**, Δ **X=0.5** and Δ **Y=0.5**, and displays the graph screen with the origin centred on the screen.

† <u>ZOOM</u> ZOOM 4:ZDecimal

ZFrac1/2

ZFrac1/2

Sets the window variables so that you can trace in increments of $\frac{1}{2}$, if possible. Sets **TraceStep** to $\frac{1}{2}$ and $\Delta \mathbf{X}$ and $\Delta \mathbf{Y}$ to $\frac{1}{4}$.

ZOOM ZOOM B:ZFrac1/2

ZFrac1/3

ZFrac1/3

ZOOM ZOOM

Sets the window variables so that you can trace in increments of $\frac{1}{3}$, if possible. Sets **TraceStep** to $\frac{1}{3}$ and ΔX and ΔY to $\frac{1}{6}$.

C:ZFrac1/3

ZFrac1/4

ZFrac1/4

Sets the window variables so that you can trace in increments of $\frac{1}{4}$, if possible. Sets **TraceStep** to $\frac{1}{4}$ and $\Delta \mathbf{X}$ and $\Delta \mathbf{Y}$ to $\frac{1}{8}$.

ZOOM ZOOM D:ZFrac1/4

ZFrac1/5

ZFrac1/5

Sets the window variables so that you can trace in increments of $\frac{1}{8}$, if possible. Sets **TraceStep** to $\frac{1}{8}$ and ΔX and ΔY to $\frac{1}{10}$.

ZOOM ZOOM

E:ZFrac1/5

ZFrac1/8

ZFrac1/8

Sets the window variables so that you can trace in increments of $\frac{1}{8}$, if possible. Sets **TraceStep** to $\frac{1}{8}$ and $\Delta \mathbf{X}$ and $\Delta \mathbf{Y}$ to $\frac{1}{16}$.

ZOOM F:ZFrac1/8

ZOOM

ZFrac1/10

ZFrac1/10

Sets the window variables so that you can trace in increments of $\frac{1}{10}$, if possible. Sets **TraceStep** to $\frac{1}{10}$ and $\Delta \mathbf{Y}$ and $\Delta \mathbf{Y}$ to $\frac{1}{20}$.

ZOOM

ZOOM

G:ZFrac1/10

Zinteger

ZInteger

Redefines the viewing window using the following dimensions:
TraceStep=1, Δ X=0.5, Xscl=10, Δ Y=1, Yscl=10.

† ZOOM ZOOM

8:Zinteger

Zinterval

Zintervalo[,listname,freqlist,confidence level] (Data list input)

+ STAT TESTS

Computes a *z* confidence interval.

7:ZInterval

Zinterval

Zinterval σ , \overline{X} ,n[, $confidence\ level$] (Summary stats input)

+ STAT

Computes a z confidence interval.

7:ZInterval

Zoom In

Zoom In

Magnifies the part of the graph that surrounds the cursor location.

† **ZOOM**

2:Zoom In

Zoom Out

Zoom Out

+ ZOOM

Displays a greater portion of the graph, centred on the cursor location.

3:Zoom Out

ZoomFit

ZoomFit

† **ZOOM**

Recalculates **Ymin** and **Ymax** to include the minimum and maximum **Y** values, between **Xmin** and **Xmax**, of the selected functions and replots the functions.

ZOOM 0:ZoomFit

ZoomRcl

ZoomRcl

+ [ZOOM]

Graphs the selected functions in a user-defined viewing window.

MEMORY 3:ZoomRcl

ZoomStat

ZoomStat

+ [ZOOM]

Redefines the viewing window so that all statistical data points are displayed.

ZOOM 9:ZoomStat

ZoomSto

ZoomSto

+ [ZOOM]

Immediately stores the current viewing window.

MEMORY 2:ZoomSto

ZPrevious

ZPrevious

+ [ZOOM]

Replots the graph using the window variables of the graph that was displayed before you executed the last **ZOOM** instruction.

MEMORY 1:ZPrevious

ZOuadrant1

ZQuadrant1

Displays the portion of the graph that is in quadrant 1.

ZOOM ZOOM A:ZQuadrant1

ZSquare

ZSquare

Adjusts the ${\bf X}$ or ${\bf Y}$ window settings so that each pixel represents an equal width and height in the coordinate system, and updates the viewing window.

+ ZOOM ZOOM 5:ZSquare

ZStandard

ZStandard

Replots the functions immediately, updating the window variables to the default values.

† ZOOM ZOOM 6:ZStandard

Z-Test(

Z-Test(μ*0*,σ

[,listname,freqlist,alternative,drawflag,colour#]) (Data list input) + STAT TESTS 1:Z-Test(

Performs a z test with frequency $freqlist. alternative = ^-1$ is <; alternative = 0 is ; alternative = 1 is >. drawflag = 1 draws results; drawflag = 0 calculates results.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

Z-Test(

Z-Test($\mu 0$, σ , \overline{X} ,n[,alternative,drawflag,colour#]) (Summary stats input)

+ STAT TESTS 1:Z-Test(

Performs a z test. alternative=**1** is <; alternative=**0** is ; alternative=**1** is >. drawflag=**1** draws results; drawflag=**0** calculates results.

Colour#: 10 - 24 or colour name pasted from [vars] COLOUR.

ZTrig

ZTrig

+ <u>ZOOM</u> ZOOM 7:ZTrig

Replots the functions immediately, updating the window variables to preset values for plotting trig functions.

Arithmetic Operations, Test Relations and Symbols

! (factorial)

Factorial: value!

Returns factorial of value.

MATH

PRB 4:!

! (factorial)

Factorial: list!

Returns factorial of *list* elements.

MATH

PRB 4:!

° (degrees notation)

Degrees notation: $value^{\circ}$

Interprets *value* as degrees; designates degrees in DMS format.

[2nd] [ANGLE]

ANGLE

1: °

r (radian)

Radian: angle

2nd [ANGLE] ANGLE

Interprets angle as radians.

3:r

T (transpose)

Transpose: matrixT

2nd [MATRIX]

MATH

Returns a matrix in which each element (row, column) is swapped with the corresponding element (column, row) of

matrix.

2: ^T

 $x^{\mathsf{th}}root^{\mathsf{X}}\sqrt{value}$

MATH MATHS

Returns $x^{th}root$ of value.

5: × √

x√(

 $x^{th}_{root} \mathbf{X} \sqrt{list}$

MATH

x√(

Returns xthroot of list elements.

MATHS 5: × √

X√(

list**×√**value

Returns list roots of value.

MATH MATHS

5: × √

x√(

 $listA^{\mathbf{X}}\sqrt{listB}$

Returns *listA* roots of *listB*.

MATH **MATHS**

5: × √

3 (cube)

Cube: value3

MATH MATHS

Returns the cube of a real or complex number, expression, list, or square matrix.

3:3

 $3\sqrt{\text{(cube root)}}$

Cube root: $\sqrt[3]{(value)}$

MATH MATHS

Returns the cube root of a real or complex number, expression, or

4:3(

= (equal)

Equal:

valueA=valueB

2nd [TEST]

TEST 1:=

Returns 1 if valueA = valueB. Returns 0 if valueA valueB. valueA and valueB can be real or complex numbers,

expressions, lists, or matrices.

≠ (not equal)

Not equal:

valueA#valueB

2nd [TEST]

TEST 2: ≠

Returns 1 if $valueA \neq valueB$. Returns 0 if valueA = valueB. valueA and valueB can be real or complex numbers, expressions, lists, or matrices.

< (less than)

Less than:

2nd [TEST]

valueA<valueB

TEST 5:<

Returns 1 if valueA < valueB. Returns 0 if $valueA \ge valueB$. valueA and valueB can be real or complex numbers, expressions, or lists.

> (greater than)

Greater than:

[2nd] [TEST]

valueA>valueB

TEST

3:>

Returns 1 if valueA > valueB. Returns 0 if $valueA \le valueB$. valueA and valueB can be real or complex numbers, expressions, or lists.

≤ (less or equal)

Less than or equal: value A < value B

2nd [TEST]

<u>ma</u>j LIESIJ TEST

6: ≤

Returns 1 if $valueA \le valueB$. Returns 0 if valueA > valueB. valueA and valueB can be real or complex numbers, expressions, or lists.

≥ (greater or equal)

Greater than or equal:

2nd [TEST]

TEST

valueA>valueB

1ES1 4:≥

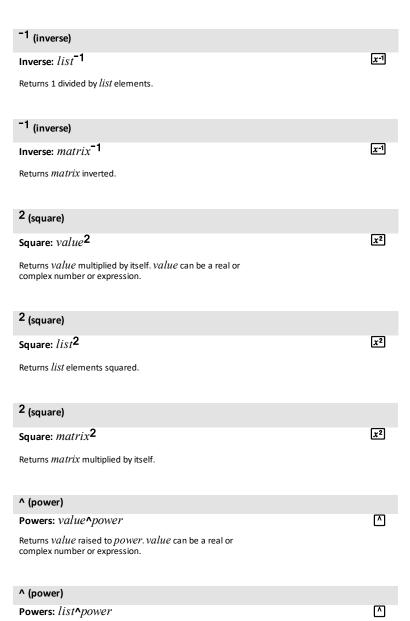

Returns 1 if $valueA \ge valueB$. Returns 0 if valueA < valueB. valueA and valueB can be real or complex numbers, expressions, or lists.

⁻¹ (inverse)

Inverse: value⁻¹

x-1

Returns 1 divided by a real or complex number or expression.

Returns *list* elements raised to *power*.

^ (power) Powers: value^list Returns value raised to list elements. ^ (power) $\overline{ }$ Powers: matrix^power Returns matrix elements raised to power. (negation) Negation: -value (-)Returns the negative of a real or complex number, expression, list, or matrix. 10[^]((power of ten) [2nd] [10x] Power of ten: 10^(value) Returns 10 raised to the value power. value can be a real or complex number or expression. 10[^]((power of ten) [2nd] [10x] Power of ten: 10^(list) Returns a list of 10 raised to the list $\sqrt{(\text{square root})}$ Square root: $\sqrt{(value)}$ [2nd] [√-Returns square root of a real or complex number, expression, or list.

Returns valueA times valueB.

* (multiply)

Multiplication:

* (multiply)	
value*list	
Returns $value$ times each list element.	
* (multiply)	
Multiplication: list*value	×
Returns each <i>list</i> element times <i>value</i> .	
* (multiply)	
Multiplication: $listA*listB$	×
Returns listA elements times listB elements.	
* (multiply)	
Multiplication: value*matrix	×
Returns value times <i>matrix</i> elements.	
* (multiply)	
Multiplication: matrixA*matrixB	×
Returns $matrixA$ times $matrixB$.	
/ (divide)	
Division: valueA/valueB	÷
Returns $valueA$ divided by $valueB$	
/ (divide)	
Division: list/value	÷
Returns list elements divided by value.	
/ (divide)	
Division: value/list	÷

/ (divide)	
Returns value divided by \emph{list} elements.	
/ (divide)	
Division: listA/listB	÷
Returns listA elements divided by listB elements.	
+ (add)	
Addition: valueA+valueB	+
Returns $valueA$ plus $valueB$.	
+ (add)	
Addition: list+value	+
Returns list in which $value$ is added to each \emph{list} element.	
+ (add)	
Addition: $listA+listB$	+
Returns listA elements plus listB elements.	
+ (add)	
Addition: matrixA+matrixB	+
Returns $\mathit{matrix}A$ elements plus $\mathit{matrix}B$ elements.	
+ (concatenation)	
Concatenation: string1+string2	+
Concatenates two or more strings.	

- (subtract)
Subtraction:
valueA-valueB

- (subtract)	
Subtraction: value-list	Ξ
Subtracts <i>list</i> elements from <i>value</i>	
- (subtract)	
Subtraction: list-value	Ξ
Subtracts $value$ from $list$ elements.	
- (subtract)	
Subtraction: listA-listB	Ξ
Subtracts listB elements from listA elements.	
- (subtract)	
Subtraction: matrixA-matrixB	Ξ
Subtracts $matrixB$ elements from $matrixA$ elements.	
' (minutes notation)	
Minutes notation: degrees minutes seconds"	2nd [ANGLE] ANGLE
Interprets minutes angle measurement as minutes.	2:'
" (seconds notation)	
Seconds notation: degrees°minutes'seconds"	(I'I)
Interprets seconds angle measurement as seconds.	

- (subtract)

Subtracts valueB from valueA.

Error Messages

When the TI-84 Plus CE-T detects an error, it returns an error message as a menu title, such as **ERR:SYNTAX** or **ERR:DOMAIN**. This table contains each error type, possible causes, and suggestions for correction. The error types listed in this table are each preceded by ERR: on your graphing calculator display. For example, you will see ERR:ARCHIVED as a menu title when your graphing calculator detects an ARCHIVED error type.

ERROR TYPE	Possible Causes and Suggested Remedies
ARCHIVED	You have attempted to use, edit, or delete an archived variable. For example, the expression dim(L1) produces an error if L1 is archived.
ARCHIVE FULL	You have attempted to archive a variable and there is not enough space in archive to receive it.
ARGUMENT	A function or instruction does not have the correct number of arguments.
	The arguments are shown in italics. The arguments in brackets are optional and you need not type them. You must also be sure to separate multiple arguments with a comma (,). For example, stdDev(list[,freqlist]) might be entered as stdDev(L1) or stdDev(L1,L2) since the frequency list or freqlist is optional.
BAD ADDRESS	You have attempted to send or receive an application and an error (e.g. electrical interference) has occurred in the transmission.
BAD GUESS	In a CALC operation, you specified a Guess that is not between Left Bound and Right Bound.
	For the solve(function or the equation solver, you specified a <i>guess</i> that is not between <i>lower</i> and <i>upper</i> .
	Your guess and several points around it are undefined.
	Examine a graph of the function. If the equation has a solution, change the bounds and/or the initial guess.
BOUND	In a CALC operation or with Select(, you defined Left Bound > Right Bound.
	In fMin(, fMax(, solve(, or the equation solver, you entered <i>lower upper</i> .
BREAK	You pressed the ON key to break execution of a programme, to halt a DRAW instruction, or to stop evaluation of an expression.
DATA TYPE	You entered a value or variable that is the wrong data type. For a function (including implied multiplication) or an instruction, you entered an argument that is an invalid data type, such as a complex number where a real number is

ERROR TYPE Possible Causes and Suggested Remedies

required.

In an editor, you entered a type that is not allowed, such as a matrix entered as an element in the stat list editor.

You attempted to store an incorrect data type, such as a matrix, to a list.

You attempted to enter complex numbers into the n/d MathPrint™ template.

DIMENSION MISMATCH

Your calculator displays the ERR:DIMENSION MISMATCH error if you are trying to perform an operation that references one or more lists or matrices whose dimensions do not match. For example, multiplying L1*L2, where L1= {1,2,3,4,5} and L2={1,2} produces an ERR:DIMENSION MISMATCH error because the number of elements in L1 and 12 do not match.

You may need to turn Plots Off to continue.

DIVIDE BY 0

You attempted to divide by zero. This error is not returned during graphing. The TI-84 Plus CE-T allows for undefined values on a graph.

You attempted a linear regression with a vertical line.

DOMAIN

You specified an argument to a function or instruction outside the valid range. The TI-84 Plus CE-T allows for undefined values on a graph.

You attempted a logarithmic or power regression with a -X or an exponential or power regression with a -Y.

You attempted to compute Σ Prn(or Σ Int(with pmt2 < pmt1.

DUPLICATE

You attempted to create a duplicate group name.

Duplicate Name

A variable you attempted to transmit cannot be transmitted because a variable with that name already

exists in the receiving unit.

EXPIRED

You have attempted to run an application with a limited trial period which has expired.

Error in Xmit

The TI-84 Plus CE-T was unable to transmit an item. Check to see that the cable is firmly connected to both units and that the receiving unit is in receive mode.

You pressed ON to break during transmission.

Setup RECEIVE first and then SEND, when sending files

([LINK]) between graphing calculators.

ID NOT FOUND

This error occurs when the SendID command is executed but the proper graphing calculator ID cannot be found.

ILLEGAL

You attempted to use an invalid function in an argument to

ERROR TYPE Possible Causes and Suggested Remedies

a function, such as **seq(** within *expression* for **seq(**. NEST

The increment, step, in seq(is 0 or has the wrong sign. . INCREMENT

The TI-84 Plus CE-T allows for undefined values on a graph.

The increment in a For(loop is 0.

You attempted to reference a variable or use a function INVALID where it is not valid. For example, Yn cannot reference Y,

Xmin. Δ **X**. or **TblStart**.

In Seq mode, you attempted to graph a phase plot without

defining both equations of the phase plot.

In **Seq** mode, you attempted to graph a recursive sequence

without having input the correct number of initial

conditions.

In **Seq** mode, you attempted to reference terms other than

(n-1) or (n-2).

You attempted to designate a graph style that is invalid within the current graph mode.

You attempted to use **Select(** without having selected

(turned on) at least one xyLine or scatter plot.

INVALID DIMENSION The **ERR:INVALID DIMENSION** error message may occur if you are trying to graph a function that does not involve the stat plot features. The error can be corrected by turning off the stat plots. To turn the stat plots off, press 2nd

[STAT PLOT] and then select 4:PlotsOff.

You specified a list dimension as something other than an

integer between 1 and 999.

You specified a matrix dimension as something other than

an integer between 1 and 99.

You attempted to invert a matrix that is not square.

ITERATIONS The **solve(** function or the equation solver has exceeded the

> maximum number of permitted iterations. Examine a graph of the function. If the equation has a solution, change the bounds, or the initial guess, or both.

irr(has exceeded the maximum number of permitted iterations.

When computing I%, the maximum number of iterations

was exceeded.

The label in the Goto instruction is not defined with a Lbl LABEL

instruction in the program.

LINK L1 (or any other file) to Restore

The calculator has been disabled for testing. To restore full functionality, use TI Connect™ CE software to download a file to your calculator from your computer, or transfer any

file to your calculator from another TI-84 Plus CE-T.

ERROR TYPE Possible Causes and Suggested Remedies

MEMORY Memory is insufficient to perform the instruction or

function. You must delete items from memory before

executing the instruction or function.

Recursive problems return this error; for example, graphing the equation **Y1=Y1**.

Branching out of an If/Then, For(, While, or Repeat loop with a Goto also can return this error because the End statement that terminates the loop is never reached. Attempting to create a matrix with larger than 400 cells.

MemoryFull

You are unable to transmit an item because the receiving unit's available memory is insufficient. You may skip the item or exit receive mode.

During a memory backup, the receiving unit's available memory is insufficient to receive all items in the sending unit's memory. A message indicates the number of bytes the sending unit must delete to do the memory backup. Delete items and try again.

MODE

You attempted to store to a window variable in another graphing mode or to perform an instruction while in the wrong mode; for example, **Drawinv** in a graphing mode other than **Func**.

NO SIGN CHANGE

The **solve(** function or the equation solver did not detect a sign change.

You attempted to compute I% when FV, (N PMT), and PV are all 0, or when FV, (N PMT), and PV are all 0. You attempted to compute irr(when neither CFList nor CFO is > 0. or when neither CFList nor CFO is < 0.

NONREAL ANSWERS

In **Real** mode, the result of a calculation yielded a complex result. The TI-84 Plus CE-T allows for undefined values on a graph.

OVERFLOW

You attempted to enter, or you have calculated, a number that is beyond the range of the graphing calculator. The TI-84 Plus CE-T allows for undefined values on a graph.

RESERVED

You attempted to use a system variable inappropriately.

SINGULAR MATRIX

A singular matrix (determinant = 0) is not valid as the argument for $^{-1}$.

The **SinReg** instruction or a polynomial regression generated a singular matrix (determinant = 0) because the algorithm could not find a solution, or a solution does not exist.

The TI-84 Plus CE-T allows for undefined values on a graph.

ERROR TYPE **Possible Causes and Suggested Remedies**

expression in the solve(function or the equation solver SINGULARITY

contains a singularity (a point at which the function is not defined). Examine a graph of the function. If the equation has a solution, change the bounds or the initial guess or both.

STAT You attempted a stat calculation with lists that are not

appropriate.

Statistical analyses must have at least two data points. Med-Med must have at least three points in each partition. When you use a frequency list, its elements must be 0. (Xmax - Xmin) / Xscl must be between 0 and 131 for a

histogram.

STAT PLOT You attempted to display a graph when a stat plot that

uses an undefined list is turned on.

SYNTAX The command contains a syntax error. Look for misplaced

functions, arguments, parentheses, or commas.

For example, **stdDev**(*list*[,*freqlist*]) is a function of the TI-84 Plus CE-T. The arguments are shown in italics. The arguments in brackets are optional and you need not type them. You must also be sure to separate multiple arguments with a comma (,). For example stdDev(list [,freqlist]) might be entered as stdDev(L1) or stdDev(L1,L2)

since the frequency list or *freqlist* is optional.

TOLERANCE NOT MET

You requested a tolerance to which the algorithm cannot

return an accurate result.

UNDEFINED You referenced a variable that is not currently defined. For example, you referenced a stat variable when there is no

current calculation because a list has been edited, or you referenced a variable when the variable is not valid for the

current calculation, such as a after Med-Med.

Electrical interference caused a link to fail or this graphing VALIDATION

calculator is not authorised to run the application.

You have tried to archive a variable that cannot be archived VARIABLE

or you have tried to unarchive an application or group. Examples of variables that cannot be archived include: Real numbers LRESID, R, T, X, Y, Theta, Statistic variables under Vars, STATISTICS menu, Yvars, and the AppldList.

VERSION You have attempted to receive an incompatible variable

version from another graphing calculator.

A programme may contain commands not supported in the OS version on your graphing calculator. Always use the

ERROR TYPE Possible Causes and Suggested Remedies

> latest OS. TI-84 Plus CE and TI-84 Plus share programs but a version error will be given if any new TI-84 Plus CE programmes may need to be adjusted for the high

resolution graph area.

A problem exists with the window variables. WINDOW

RANGE You defined Xmax Xmin or Ymax Ymin.

You defined θ max θ min and θ step > 0 (or vice versa).

You attempted to define Tstep=0.

You defined Tmax Tmin and Tstep > 0 (or vice versa). Window variables are too small or too large to graph correctly. You may have attempted to zoom to a point that

exceeds the TI-84 Plus CE-T's numerical range.

A point or a line, instead of a box, is defined in ZBox. ZOOM

A **ZOOM** operation returned a maths error.
