Rover from the top

Turn Rover Over

**What do you
see?**

Sensors on Rover

Motors to turn
the wheels

Ranger to
measure distance

Color sensor to
detect different
colors

TI-Rover orientation and virtual grid

Rover programs set the initial position as the origin and the heading as 0 degrees measured from the x-axis.

Note: The Rover tracks its position on a virtual coordinate grid with a unit value of 10 cm. The coordinate grid position applies to the `to_xy(x,y)`, `to_polar(r,theta_degrees)` and `to_angle(angle, "unit")` functions on the Rover Drive menu. The virtual grid also applies to Path menu functions.

Connecting Rover to your calculator

1 Make sure that your Rover is switched on.

3 Plug A side into port on calculator the Rover Hub.

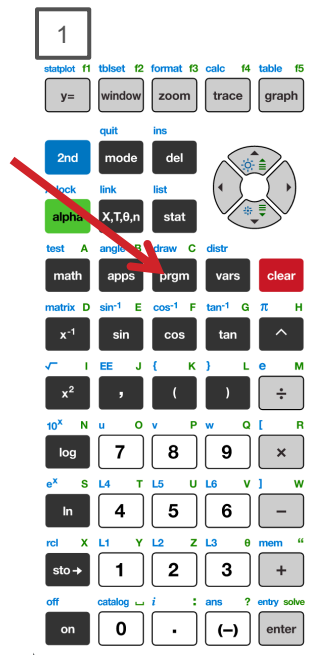

2 Plug B side into USB B port of the Rover Hub.

Unit-to-unit cable

Creating a new Python Program

Press the **[prgm]** key to create, edit and execute TI-Python programs.

Press down arrow **[enter]** or Press **[2]** to select 2: Python App

You have the option to run, edit, create or manage programs.

Press **[New]** softkey (zoom button)

You are prompted to enter a program name. The blinking A cursor shows that you are in alpha entry mode. The green alpha labels on the keys are active.

Type your program name and press **[Ok]**.

You are now in position to begin entering statements to your program.

Entering a TI-Rover Program – importing the TI-Rover module and connecting to a Rover

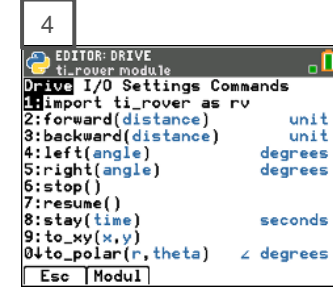

The Python program editor uses an insert cursor and a backspace delete.
Press [Fns...] softkey to see functions to use in your program.

Press **right arrow** repeatedly or **left arrow** to move to the Modul menu.

You will see a menu of installed modules available to use functions from. Select **7:ti_rover**.

Select **1:import ti_rover as rv**.

The `ti_rover` module import statement is pasted to your program. The `ti_rover` import statement is required at the beginning of every Rover program. This import statement brings in Rover functions to use in your program, sets Rover's initial position and sets up communication between the Rover and the Hub.

Entering a TI-Rover Program

1

You are now ready to enter functions to control your Rover. Navigate to the Rover menus by pressing [Fns...] then arrow to the Modul menu.

2

Then select **ti_rover...** to see options.

3

You begin on the Drive menu. Select the **2:forward()** function.

4

Enter a value for the number of Rover units to drive forward. Arrow to the end of the statement and press [enter] to move to the next statement.

A faster approach is to use [2nd] [enter] from any place on a line to complete the statement and move the cursor to the beginning of a blank line below.

Note: It is important that each statement begin on a new line.

5

Navigate to the Drive menu again by press [fns...], left arrow, 7:ti_rover...,4:left() to select the left turn function.

6

Enter a value for the angle to turn in degrees. Press [2nd] [enter] to move to the next statement.

7

Navigate to the Drive menu again, then select **2:forward()**. After the function is pasted enter the Rover units to drive. Press [2nd] [enter] to move to the next statement..

8

You are now ready to run your TI-Rover program.

Running a TI-Rover Program

1

```
EDITOR: DRIVE  
PROGRAM LINE 0005  
import ti_rover as rv  
rv.forward(3)  
rv.left(180)  
rv.forward(3)  
_
```

Fns... a A # Tools Run Files

You are now ready to run your program.

Before pressing **[Run]** go through the pre-drive checklist.

1. Make sure that TI-Rover is turned ON.
2. Make sure that the calculator unit-to-unit cable is connected to the Hub inside the Rover. Plug the B end of the cable into the Data USB B port of the Hub. Plug the A end of the cable into the calculator.
3. Press **[Run]**.

2

```
PYTHON SHELL  
  
>>> # Shell Reinitialized  
>>> # Running DRIVE  
>>> from DRIVE import *  
>>> |
```

Fns... a A # Tools Editor Files

The program will run in the Python shell. You will receive messages on the status of the program.

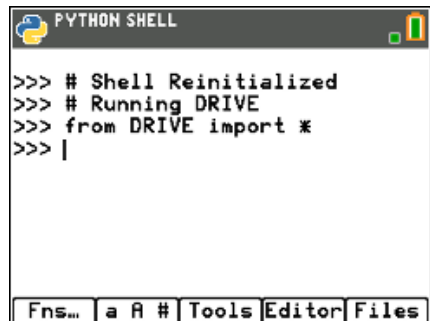

You can run the program again by pressing **[Tools]** and selecting **1:Rerun Last Program** from the menu.

You can return to the program editor by pressing **[Editor]**.

Editing a Rover Program

1

```
PYTHON SHELL

>>> # Shell Reinitialized
>>> # Running DRIVE
>>> from DRIVE import *
>>> |
```

Fns... a A # Tools Editor Files

Press **[Editor]** to go back to your Python editor page.

2

```
EDITOR: DRIVE
PROGRAM LINE 0001

import ti_rover as rv
rv.forward(3)
rv.left(180)
rv.forward(3)
```

Fns... a A # Tools Run Files

Use the arrow keys to position the cursor to change the value of the forward distance.

3

```
EDITOR: DRIVE
PROGRAM LINE 0002

import ti_rover as rv
rv.forward(3_
rv.left(180)
rv.forward(3)
```

Fns... a A # Tools Run Files

Press **[del]** to backspace over the 3.

4

```
EDITOR: DRIVE
PROGRAM LINE 0002

import ti_rover as rv
rv.forward(_
rv.left(180)
rv.forward(3)
```

Fns... a A # Tools Run Files

Type in a new value for distance, **right arrow** to the end of the line, then **down arrow** to position the cursor to change the value of the second forward() function.

5

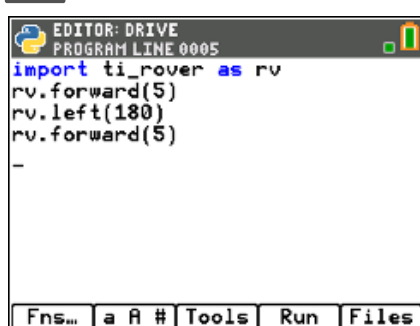

```
EDITOR: DRIVE
PROGRAM LINE 0004

import ti_rover as rv
rv.forward(5)
rv.left(180)
rv.forward(3_
```

Fns... a A # Tools Run Files

Press **[del]** to backspace over the current distance value. Type in a new value for distance, Press **[2nd]** **[enter]** to move to the next statement.

6

```
EDITOR: DRIVE
PROGRAM LINE 0005

import ti_rover as rv
rv.forward(5)
rv.left(180)
rv.forward(5)
-
```

Fns... a A # Tools Run Files

Press **[Run]** to run the program in the Python shell.

7

```
PYTHON SHELL

>>> # Shell Reinitialized
>>> # Running DRIVE
>>> from DRIVE import *
>>> |
```

Fns... a A # Tools Editor Files

```

Fns... a A # Tools Run Files

You are now in the editor ready to make changes or to run the new program.

Entry and Edit Tips

- » Use **number key shortcuts** or **arrow keys** and **[enter]** to select from menus
- » Use **arrow keys** to move the cursor around the screen.
- » Use **[alpha]** **repeatedly** to cycle from numeric, to lower case alpha to upper case alpha entry mode. The cursor indicates the current mode.
- » Use **[2nd] [A-lock]** to lock to alpha entry or to return to numeric entry.
- » Use **[Fns...]** **softkey** to bring up Python function menus, including the **Modul (modules)** menu.
- » Use **[clear]** or **[Esc]** **softkey** to back out of a menu.
- » Use **[del]** as a destructive backspace
- » Use **[2nd] [enter]** from any place on a line to complete the statement and move the cursor to the beginning of a blank line below.
- » Use **[Tools]** **softkey** menu to undo a clear and to copy, cut, paste and more.
- » Use **[Editor]** **softkey** to return to the editor from the Shell.
- » Use **[2nd] [quit]** to leave the Python app and return to the calculator.

MAKE IT MOVE!

New Program:

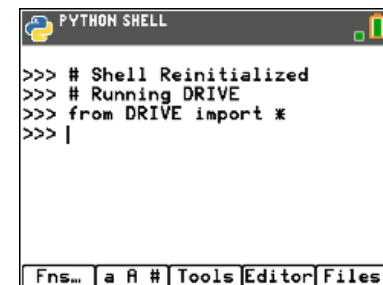

```
EDITOR: DRIVE
PROGRAM LINE 0002
import ti_rover as rv
rv.forward(_
```

Press **[Fns...]**, **left arrow**, then **7:ti_rover...** for the Rover menus.

Press **[Run]** to run the program in the Python shell.

Task: Discover how far Rover drives per unit.

Use differing values (1-20) to determine what 1 Rover unit is.

```
PYTHON SHELL
>>> # Shell Reinitialized
>>> # Running DRIVE
>>> from DRIVE import *
>>> |
```

From the Python shell, press **[Editor]** to move from the shell to the Python editor.

Set the color

New Program:

```
EDITOR: MYCOLOR
PROGRAM LINE 0002
import ti_rover as rv
rv.color_rgb(,)
```

Press [Fns...], left arrow, then 7:ti_rover... for the Rover menus.

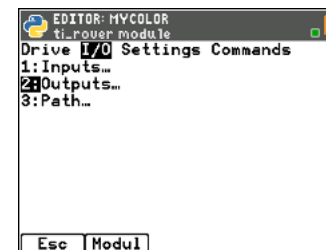

Press [Run] to run the program in the Python shell.

Task: Set the color output of the RGB LED.

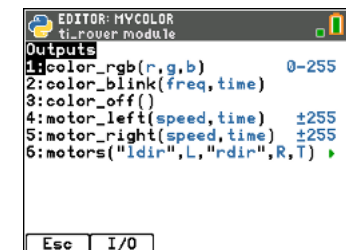

Each color takes a value (0-255).

Challenge Task: Try to make Yellow

Find the color_rgb() function on the Rover Outputs menu. Enter values for the red, green and blue components of the color to display.

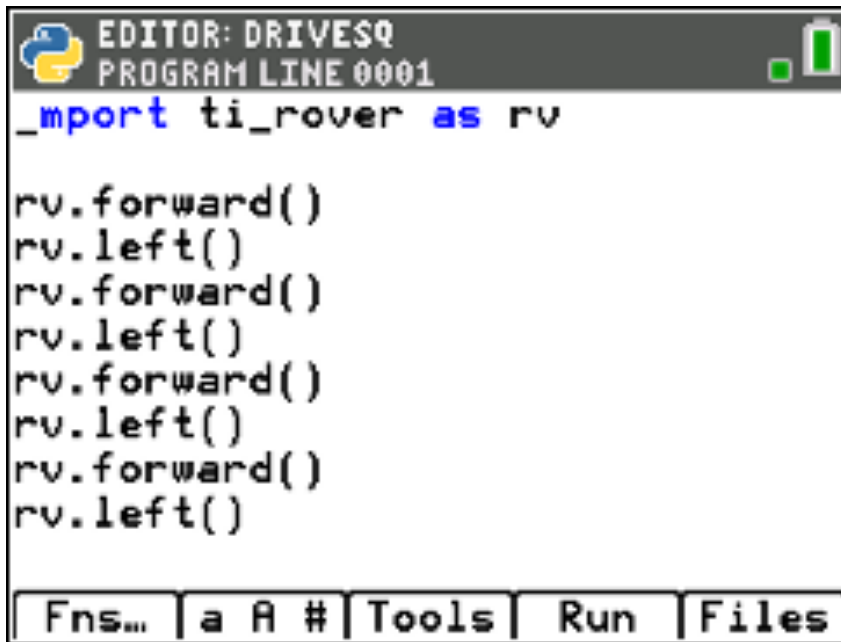

```
EDITOR: MYCOLOR
ti_rover module
Drive I/O Settings Commands
1:color_rgb(r,g,b)
2:color_blink(freq,time)
3:color_off()
4:motor_left(speed,time)
5:motor_right(speed,time)
6:motors('Idir','L','rdir','R','T')
Esc Modul
```

```
EDITOR: MYCOLOR
ti_rover module
Outputs
1:color_rgb(r,g,b) 0-255
2:color_blink(freq,time)
3:color_off()
4:motor_left(speed,time) ±255
5:motor_right(speed,time) ±255
6:motors('Idir','L','rdir','R','T')
Esc I/O
```

Explore angles

New Program:

```
EDITOR: DRIVESQ
PROGRAM LINE 0001
import ti_rover as rv

rv.forward()
rv.left()
rv.forward()
rv.left()
rv.forward()
rv.left()
rv.forward()
rv.left()
```

The screenshot shows a Python editor window titled 'EDITOR: DRIVESQ' with 'PROGRAM LINE 0001' at the top. The code defines an alias for the 'ti_rover' module and then uses its methods to move forward and turn left in a sequence that would trace a square. The editor has a menu bar at the bottom with 'Fns...', 'a A #', 'Tools', 'Run', and 'Files'.

The program above is a framework for driving a square.
Enter values for distance and turn angle.

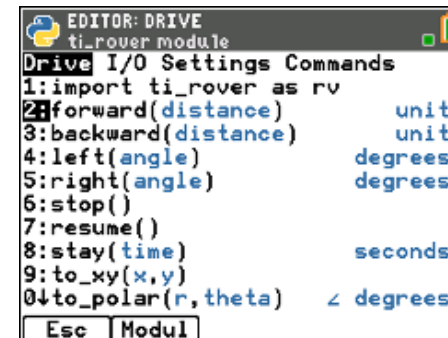

Press **[Fns...]**, **left arrow**, then **7:ti_rover...** for the Rover menus.

Press **[Run]** to run the program in the Python shell.

Task: Drive a square.

Challenge Task: Try to drive an equilateral triangle.

See the inputs for the most common drive functions below.

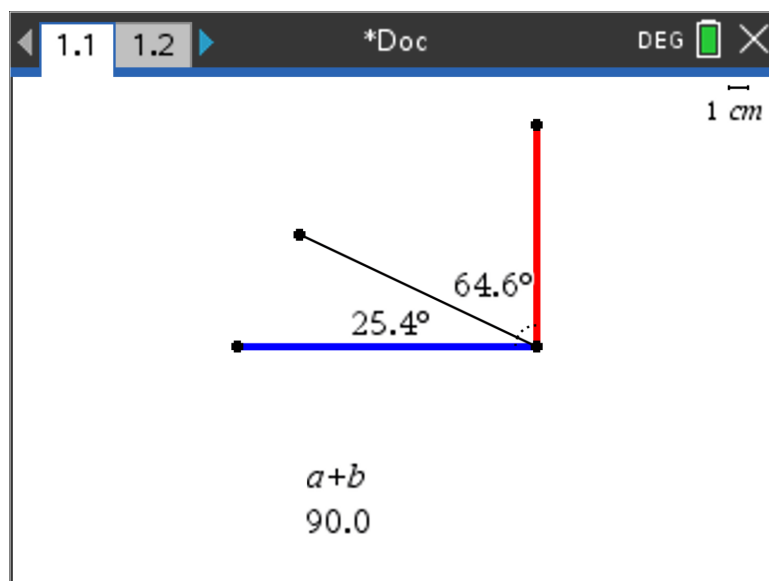

```
EDITOR: DRIVE
ti_rover module
Drive I/O Settings Commands
1:import ti_rover as rv
2:forward(distance)      unit
3:backward(distance)    unit
4:left(angle)            degrees
5:right(angle)           degrees
6:stop()
7:resume()
8:stay(time)             seconds
9:to_xy(x,y)
10:to_polar(r,theta)     < degrees
```

The screenshot shows a Python editor window titled 'EDITOR: DRIVE' with 'ti_rover module' at the top. It lists common drive functions and their units: forward/backward (unit), left/right (degrees), stop/resume, stay (seconds), to_xy, and to_polar (r, theta). The editor has a menu bar at the bottom with 'Esc' and 'Modul'.

Quick Math Reminders
